ABSTRACT

Introduction: We describe a proactive method using electronic patient records (EPR) to identify pseudophakic patients with diabetic macular oedema (DMO) that might benefit from treatment with 0.2 µg/day fluocinolone acetonide (FAC; ILUVIEN®) implant.

Methods: Our EPR audit tool (Medisoft®) identified diabetic patients (May 2011–December 2014) with National Screening Committee-confirmed grade M1 maculopathy. Searches segmented this DMO patient population into patient groups who: (1) had received ranibizumab therapy, (2) had received ≥2 macular laser treatments, or (3) were unsuitable for macular laser or ranibizumab therapy. Pre-specified criteria identified patients insufficiently responsive to treatment, and their electronic case notes were flagged for clinicians to consider FAC, based on National Institute for Health and Care Excellence (NICE) TA301.

Results: Using this methodology, 138 patients with DMO were identified, of whom 87 were assigned to group 1, 32 to group 2, and 29 to group 3 (10 patients were included in both groups 2 and 3). From these, 28 different pseudophakic eyes were identified as suitable for treatment with FAC, based on insufficient response to prior treatment.

Conclusion: EPR audit offers a real-world methodology to efficiently identify patients that might benefit from treatment with FAC. Limitations apply, and thorough documentation of lens status and ocular comorbidities is vital; however, this approach was more rapid than prospective recruitment through the clinic. Flagging patient records using EPR audit offers a practical process for application to clinical practice, thereby optimizing patient care in line with NICE TA301 guidelines.

[Dance Magazine: Bring in the Big Bucks: Three experts share their best fundraising tips.](#)

Let's face it: In the U.S., government support for the arts is severely limited. Most dance companies rely on donations to stay afloat. According to Smuin Contemporary Ballet development director Deb Glazer, ticket sales typically cover between 30 and 40 percent of all operating costs for most medium to large troupes. For those with feeder schools, roughly another 30 percent is covered by tuition. Grants can also benefit the bottom line, but they're few and far between. That means a major...

About The Free Library

Since 2003, The Free Library has offered free, full-text versions of classic literary works from hundreds of celebrated authors, whose biographies, images, and famous quotations can also be found on the site. Recently, The Free Library has been expanded to include a massive collection of periodicals from hundreds of leading publications covering Business and Industry, Communications, Entertainment, Health, Humanities, Law, Government, Politics, Recreation and Leisure, Science and Technology, and Social Sciences. This collection includes millions of articles dating back to 1984 as well as newly-published articles that are added to the site daily.

The Free Library is an invaluable research tool and the fastest, easiest way to locate useful information

Link/Page Citation 805 0 Like Share 0

STAMFORD, Conn., Nov. 15 /PRNewswire/ -- Purdue Pharma L.P. today announced a pilot program to integrate unique radio frequency identification (RFID) tags on labels for 100-tablet bottles of OxyContin(R) (oxycodone HCl controlled-release) Tablets shipped to two of its largest customers. Purdue is one of the first pharmaceutical companies to provide fully integrated, anti-counterfeiting packaging designed to protect pharmaceutical products against counterfeiting and diversion through individual electronic "license plates." It is also the first to comply with the multi-layered approach, including RFID, to combat counterfeit drugs recommended today by the FDA's Counterfeit Drug Task Force. The initial shipments of the RFID-tagged bottles will be sent this week to Wal-Mart and H.D. Smith, the seventh-largest drug wholesaler in the U.S.

RFID involves the placement of small electromagnetic chips on cartons, pallets, and individual product labels. This allows manufacturers and wholesalers to track products more closely than ever before as they move throughout the distribution process.

"Our objective in implementing these security features is to deter counterfeiting, reduce diversion, and help ensure the authenticity, safety, and integrity of our products," said Aaron Graham, Vice President and Chief Security Officer for Purdue Pharma. "RFID technology provides the pharmaceutical industry with the ability to create an electronic drug pedigree, or tracking mechanism, that will lead to greater supply chain security and patient protection against counterfeit drugs."

A drug "pedigree" is the paperwork that follows products from the manufacturer, to wholesaler, to pharmacy. It is more difficult to track the authenticity of drugs with incomplete pedigrees. Purdue's initiative addresses a number of consumer safety issues, including the redistribution of counterfeit, adulterated, re-labeled, and diverted prescription drugs of unknown authenticity, efficacy, and safety. Based on the availability of RFID tags, which are assembled in Maryland and Germany, Purdue plans to expand the implementation of RFID labels for all bottles of OxyContin Tablets.

"This is an outstanding collaboration between a manufacturer and distributor which will help protect the nation's supply of medicines and help ensure that patients receive only authentic, efficacious, and safe products," said John Burke, Vice President, National Association of Drug Diversion Investigators and Coordinator, Southern Ohio Prescription Drug HIDTA (High Intensity Drug Trafficking Area).

"RFID technology is an important new tool that will help our community pharmacists ensure the safety and authenticity of the products they

ABSTRACT
The use of digital technology, including computers, cell phones, computer games, and so on, most recently, on-the-go for recreational purposes, has increased among our youth over the past 15 years. Children and adolescent between the ages of 8 to 18 years spend an average of 5-6 hours per day using information and communication technologies. It is a useful progress because of the increase of internet usage which is unlimited, uncontrolled and uninhibited and easiness which arrival all sorts of to informations or persons but this state can cause to some important negative results too. The computer games, the internet explores is gradually estrange from social life the children and adolescent. In this paper, has been mentioned to negative effect of internet usage, computer games on mental health of children and adolescents. [TAF Prev Med Bull. 2008; 7(3): 253-256]

A Tale of the Cold War: Jews, Catholics, and Black Market Babies*
Authors: *Greene N.*
Pages: 131 - 159
Abstract: Memories of the Cold War are virtually inseparable from those of several trials and Congressional hearings that took place around 1950. Following one another in rapid succession, all reflected, and fueled, what has been called the Great Fear of the era. But concerns and targets varied. Some—like the trials of Alger Hiss (1950) and of Julius and Ethel Rosenberg (1951)—were focused on spies and spying; others—like the hearings launched in the late 1940s by HUAC (the House Committee on Un-American Activities) and those held by the Tydings Committee (1951)—were designed to root out subversion in worlds as diverse as those of entertainment and the State Department. In a somewhat different vein, the Congressional hearings led in 1950–1951 by Senator Estes Kefauver of Tennessee were charged with investigating the role of organized crime in America. Speaking of the gangsters who paraded before Kefauver and his committee, in a vivid passage Eric F. Goldman writes that the televised hearings, with their parade of endless “shadowy figures that obviously controlled so much, catalyzed the whole vague feeling that corruption was moving through all American life like a swarm of maggots.”¹¹

GENERAL PAPERS

Abstract

Due to global events in recent years, applications for political asylum have increased, although the number of people granted asylum in the United States and elsewhere has declined. Physicians and other health care professionals can play a crucial role in the evaluation of individuals seeking asylum, since appropriately documented objective clinical evidence of torture and other forms of persecution can increase the likelihood that survivors of human rights abuses obtain asylum. Many clinicians have the requisite expertise and skills needed to conduct forensic asylum evaluations. However, despite growing interest in this area, the demand for medical and psychiatric forensic evaluations exceeds the number of clinicians who are prepared to conduct asylum evaluations. In an effort to increase the number of qualified clinicians interested and involved in medical and psychiatric evaluations of asylum seekers, this article offers a summary of standard and best practices in the area, including recommended qualifications and competencies relevant to the practice of forensic asylum evaluations, guidance on effective approaches to the medical and psychiatric evaluation of asylum seekers, and recommendations related to medicolegal documentation and testimony. We also highlight gaps in evidence regarding best practices.

Automated linkage of patient records from disparate sources

Xiaochun Li, Huiping Xu, Changyu Shen, more... Show all authors

<https://doi.org/10.1177/0962280215626180>

Article information

Abstract

We introduce an automated method of record linkage that has two key features, automated selection of match field interactions to include in the model for estimation and automated threshold determination for classifying record pairs to matches or non-matches. We applied our method to two real-world examples. The first example demonstrated results consistent with our earlier work: When data quality is adequate and the match field discriminating power is high, matching algorithms exhibit similar performance. The second example demonstrated that our method yields a lower false positive rate and higher positive predictive value than the Fellegi-Sunter model in the face of low data quality. When compared to the Fellegi-Sunter model, simulation studies suggest that our method exhibits better overall performance as indicated by higher area under the curve, and less biased estimates for both the match prevalence rate and the m- and u-probabilities over a range of data scenarios, especially when the match prevalence is extreme. Computationally, our method is as efficient as the Fellegi-Sunter model. We recommend this method in situations that an unsupervised linking algorithm is needed.

Inadequate vitamin D status: does it contribute to the disorders comprising syndrome 'X'?

B. J. Boucher^(a1)

DOI: <https://doi.org/10.1079/BJN19980055> Published online by Cambridge University Press: 09 March 2007

Abstract

Environmental factors are important in the aetiology of glucose intolerance, type II diabetes and IHD. The lack of vitamin D, which is necessary for adequate insulin secretion, relates demographically to increased risk of myocardial infarction. These disorders are connected, degenerative vascular disease increasing with glucose intolerance and diabetes and, with its risk factors, comprising syndrome 'X'. Evidence is presented suggesting that vitamin D deficiency may be an avoidable risk factor for syndrome 'X', adding another preventative measure to current recommendations which are aimed at reducing the worldwide epidemic of these disorders. Experimentally, vitamin D deficiency progressively reduces insulin secretion; glucose intolerance follows and becomes irreversible. Relationships between vitamin D status, glucose tolerance and 30 min insulin secretion during oral glucose tolerance tests are reported in British Asians; insulin secretion, but not glycaemia, improving with short-term supplementation. Studies showing reduction in blood pressure and in risk of heart attack and diabetes with exercise (usually outdoor), rarely consider the role of vitamin D status. Glycaemia and insulin secretion in elderly European men, however, relate to vitamin D status, independent of season or physical activity. Prolonged supplementation can improve glycaemia. Hypertension improves with vitamin D treatment with or without initial deficiency. Vitamin D status and climate are reviewed as risk factors for myocardial infarction; the risk reducing with altitude despite increasing cold. Glycaemia and fibrinogenemia improve and insulin secretion increases in summer. Variation in vitamin D requirements could arise from genetic differences in vitamin D processing since bone density can vary with vitamin D-receptor genotype. Vitamin D receptors are present in islet β cells and we report insulin secretion in healthy Asians differing profoundly with the Apa I genotype, being independent of vitamin D status. Those at risk of vitamin D deficiency include the elderly, those living indoors or having a covered-up style of dress, especially dark-skinned immigrants, and pregnant women, and these are groups recognized as being at increased risk of diabetes.

ABSTRACT

The use of chemical agents for terrorist attacks or military warfare is a major concern at the present time. Chemical agents can cause significant morbidity, are relatively inexpensive, and are easy to store and use. Weaponization of chemical agents is only limited by the physicochemical properties of some agents. Recent incidents involving toxic industrial chemicals and chemical terrorist attacks indicate that critical care services are frequently utilized. For obvious reasons, the critical care literature on chemical terrorism is scarce. This article reviews the clinical aspects of diagnosing and treating victims of chemical terrorism while emphasizing the critical care management. The intensivist needs to be familiar with the chemical agents that could be used in a terrorist attack. The

Search help

Exact match supported for author search results

You can perform an exact author search by enclosing the name (first and/or last) of the author in quotation marks.

Boolean operators

The Boolean operators AND, OR, and NOT can be applied to search terms.

AND (also + or &)

Use AND to search for documents containing two or more terms. For example, the following query returns documents containing both cat and dog:

cat AND dog

The AND operator is applied by default; for example cat AND dog produces the same results as cat dog.

OR

Use OR to search for documents containing at least one of two or more terms. For example, the following query returns documents containing cat, documents containing dog, and documents containing cat and dog:

cat OR dog

Abstract

1. Introduction

2. Iran as an international 'Citizen' in non-proliferation and disarmament

The purpose of this article is to revive academic discussion about the potential of Islamic norms to affect State policy with regard to weapons of mass destruction. A number of religious norms govern just warfare (*jus in bello*). Yet, the extension of such norms to weapons of mass destruction, let alone their effect on State policy, has been under-researched not only by Western scholars but also by Islamist ethicists. This case study sets out to discuss different contextual aspects of the role played by religion in Iranian decision-making in relation to chemical weapons during the Iran-Iraq War (1980–1988). Iran constitutes a *sui generis* case when it

Search Tips

You can use the Boolean operators AND (also + or &), OR and NOT (also -) within search fields. These operators must be entered in UPPERCASE to work.

If more than one term is entered, and no operators are specified, terms are searched using AND. To search for a phrase, put the terms in quotes. For example, *spinal cord* searches spinal AND cord while "spinal cord" finds this exact phrase.

Wildcards

Use a question mark (?) in a search term to represent a single character (*wom?n* finds women or woman). Use an asterisk (*) to represent zero or more characters. For example, *plant** finds all words with that root (plant, plants, & planting) while *an*mia* variants with one or more letters (anemia &

Abstract

Successfully developing a new product, commercial purposes involves complex and dynamic conditions of knowledge management that fosters innovation, which knowledge is created and exploited in the and source of innovation capabilities. The objective of the study is to examine the relationship between conditions of knowledge management and innovation capability. The sample consists of 102 Colombian new technology-based firms. According to results, conditions of knowledge management has a positive effect on innovation capability.

...nt engagement practices applied in leading innovation-driven companies in the Information and Communication Technologies (ICT) sector. It specifically focusses on practices designed in order to enhance employees' role in developing innovation in an open innovation (OI) context, leveraging digital communication and community tools. The operational integration between internal and external resources is to a large extent a cultural challenge where new competencies are required from employees. Employee-driven innovation (EDI) can be an important means supporting the transformation toward more OI models. Relying on a case-based methodology, we develop a conceptual framework of EDI practices in OI contexts. We highlight the benefits of involving all employees in

SEARCH TIPS

Boolean searches

You can use the Boolean Operators AND, OR and NOT within search fields. By default an AND relationship is assumed between search terms unless another operator is specified.

Searching for authors

To search for multiple authors, separate each author name with either AND or OR. Using AND will search for content that has been co-authored by the authors. Using OR will search for content that has been authored by either of the authors.

Searching for phrases

Enclose your search term with quotation marks to search for an exact match of that phrase. Without quotation marks, articles including all of the search terms somewhere in the article will be listed. For example searching for "civil war" will find articles containing that exact phrase.

Wildcards

Project MUSE

<https://muse.jhu.edu/>

- Zaměřen na humanitní a sociální vědy, umění a lékařství.
- Zpřístupňuje literaturu od 300 neziskových vydavatelů (univerzity, výzkumné organizace).
- Některé dokumenty jsou volně přístupné.

Seznam knih a časopisů s otevřeným přístupem:

<https://about.muse.jhu.edu/muse/open-access-overview/>

- Pokrývá 700 časopisů a 60 000 knih od 125 vydavatelů od r. 1995.
- Při vyhledávání lze používat booleovské operátory AND, OR a NOT, oboustranné horní uvozovky pro frázi a hvězdičku pro pravostranné rozšíření.

ANTICKÉ POZNÁVANIE DUNAJA OD 8. STOROČIA PRED N. L. DO 1. STOROČIA N. L.
Michal Habaj
Danube. Antiquity. Ancient geography. Herodotos. Augustus.

The **Danube** was one of the most important rivers in ancient geography. Its upper and middle course divided the Romans from the tribes to the north, while its lower course separated the Greek world from the Scythians. In ancient thought it was not only a real natural barrier, but also the boundary of the oikumené, the meeting place between the civilized world and the mythical north. The study considers the phases of the process of discovering the **Danube** from its first mentions until Augustus, when its whole length was known as a result of Roman expansion. The whole process of exploration is evaluated on the basis of ancient sources, epigraphy and archaeological finds. Relevant events are mentioned, and the sources of various ideas and traditions are analysed.

MIT Open Access Articles

Základní vyhledávání

The screenshot shows the MIT Open Access Articles website. The browser tabs include 'Moravská zemská knihovna v Brně', 'Google', 'MIT Open Access Articles', and '02201319Habaj.pdf'. The address bar shows 'https://dspace.mit.edu/handle/1721.1/49433'. The page header includes 'MIT Libraries | DSpace@MIT' and navigation links: 'DSpace@MIT Home', 'MIT Open Access Articles', and 'MIT Open Access Articles'. The main heading is 'MIT Open Access Articles'. Below it, a paragraph states: 'The MIT Open Access Articles collection consists of scholarly articles written by MIT-affiliated authors that are made available through DSpace@MIT under the MIT Faculty Open Access Policy, or under related publisher agreements. Articles in this collection generally reflect changes made during peer-review.' A section titled 'Version details are supplied for each paper in the collection:' lists three types of versions: 'Original manuscript: author's manuscript prior to formal peer review', 'Author's final manuscript: final author's manuscript post peer review, without publisher's formatting or copy editing', and 'Final published version: final published article, as it appeared in a journal, conference proceedings, or other formally published context (this version appears here only if allowable under publisher's policy)'. Below this, a note says 'Some peer-reviewed scholarly articles are available through other DSpace@MIT collections, such as those for departments, labs, and centers.' A section 'More information:' lists links: 'Working with the MIT Faculty Open Access Policy', 'Submitting a Paper Under the Policy', 'FAQ About the Policy', and 'MIT/Springer Author Rights Agreement'. A red box highlights the text: 'Prohledává se nejen databáze článků, ale také repozitář.' To the right, a sidebar contains a search bar with 'noise analysis' and a magnifying glass icon. Below the search bar are radio buttons for 'Search DSpace' (selected) and 'This Collection'. A 'BROWSE' section follows, with a red arrow pointing to the 'Search DSpace' option. The 'BROWSE' section has two main categories: 'All of DSpace' and 'This Collection'. Under 'All of DSpace' are links for 'Communities & Collections', 'By Issue Date', 'Authors', 'Titles', and 'Subjects'. Under 'This Collection' are links for 'By Issue Date', 'Authors', 'Titles', and 'Subjects'. A red dashed box highlights the 'This Collection' section with the text: 'Hledání probíhá pouze v databázi článků open access.' At the bottom, a 'Recent Submissions' section shows two article thumbnails. The first article is 'Carbon Nanotube Formic Acid Sensors Using a Nickel Bis(ortho-Diiminosemiquinonate) Selector' by Lin, Sibö; Swager, Timothy M (American Chemical Society (ACS), 2018-02). The second article is 'Selecting ultra-faint dwarf candidate progenitors in cosmological N-body simulations at high redshifts'.

MIT Open Access Articles

The MIT Open Access Articles collection consists of scholarly articles written by MIT-affiliated authors that are made available through DSpace@MIT under the MIT Faculty Open Access Policy, or under related publisher agreements. Articles in this collection generally reflect changes made during peer-review.

Version details are supplied for each paper in the collection:

- Original manuscript: author's manuscript prior to formal peer review
- Author's final manuscript: final author's manuscript post peer review, without publisher's formatting or copy editing
- Final published version: final published article, as it appeared in a journal, conference proceedings, or other formally published context (this version appears here only if allowable under publisher's policy)

Some peer-reviewed scholarly articles are available through other DSpace@MIT collections, such as those for departments, labs, and centers.

Abstract
We consider the noisy thermal amplifier channel, where signal modes are amplified together with environmental thermal modes. We focus on the secret-key capacity of this channel, which is the maximum amount of secret bits that two remote parties can generate by means of the most general adaptive protocol, assisted by unlimited and two-way classical communication. For this channel only upper and lower bounds are known, and in this work we improve the lower bound. We consider a protocol based on squeezed states and homodyne detections, in both direct and reverse reconciliation. In particular, we assume that trusted thermal noise is mixed on beam splitters controlled by the parties in a way to assist their homodyne detections. The new improved lower bounds to the secret-key capacity are obtained by optimizing the key rates over the variance of the trusted noise injected, and the transmissivity of the parties' beam splitters. Our results confirm that there is a separation between the coherent information of the thermal amplifier channel and its secret key capacity.

AFRICAN JOURNALS ONLINE (AJOL) JOURNALS SEARCH USING AJOL RESOURCES

African Journals Online

Welcome to AJOL!

Researchers and policy-makers need access to contextually-relevant quality research publications from Africa in order to develop solutions to address the continent's challenges in health, education, climate change & under-development.

African Journals OnLine (AJOL) is the world's largest and preeminent platform of African-published scholarly journals. **AJOL is a Non-Profit Organisation that (since 1998) works to increase global & continental online access, awareness, quality & use of African-published, peer-reviewed research.** Millions of monthly downloads by site users from nearly every country in the world are an indication of the need and widespread use of the AJOL initiative. More than half of the repeat users are from Africa.

AJOL hosts **526 Journals**
including **264 Open Access Journals**

The site has **14 927 Issues**
containing **181 052 Abstracts**.

There are **174 916 Full Text Articles** for download
of which **114 449** are **Open Access**

HOW TO USE AJOL:

- [AJOL's Partners](#)
- [Terms and Conditions of Use](#)
- [Contact AJOL](#)

Since 1998, AJOL has been working for **African research to contribute to African development** by:

- Massively increasing global visibility of [partner journals](#) (AJOL is NOT a publisher, we are a journal aggregator platform - millions of site visits from all over the world)
- Massively increasing global access to research published in African journals (millions of article downloads each month via AJOL)
- Massively increasing African readership of African research
- Quality, cost-saving (free) technical services to African-published journals to help their financial sustainability

AJOL is a non-profit, relying on your support.

Solid Waste Management in Nairobi, Kenya. A case for emerging economies.

Max Muniafu
United States International University Kenya

Everylyne Otiato

Abstract

Industrialization and globalization have increased the quantity and quality of goods that are produced and moved around the world mainly through trade. This has led to an increased generation of waste since due to availability; items are discarded with no real attachment or need for repair. Improved quality has seen the use of materials, which are either synthetic or not common in high concentrations in nature's living life cycles and thus are potentially hazardous when released from consumer products into the environment. The question of what to do with human trash has been of concern to every society and over time, the concerned local authorities have set up waste collection and disposal systems. There are numerous reasons why we need to be concerned with waste. It is costly to dispose of, and the generation of large amounts of wastes impacts the environment. Domestic and industrial discharges of waste contaminate air, land and water with pollutants and toxics that can harm human and animal health and plant life. Waste technologies must therefore grow hand in hand with changing societal complexities to cope with the high volumes and

Search Tips

Boolean searches

You can use the Boolean Operators AND, OR and NOT within search fields. By default an AND relationship is assumed between search terms unless another operator is specified.

Searching for authors

To search for multiple authors, separate each author name with either AND or OR. Using AND will search for content that has been co-authored by the authors. Using OR will search for content that has been authored by either of the authors.

Abstract

This paper illustrates a comprehensive and systematic approach for the identification of new or emerging risks of chemicals (NERCs) for workers, consumers and the environment. The methodology illustrated here is composed of three steps: 1) signal identification; 2) signal evaluation and prioritisation and when necessary; 3) assessing follow-up actions for further risk management measures. During signal identification, new information with regard to adverse effects induced by the potential NERC is gathered using various information sources. Based on collected additional information, the causality between chemical exposure and the adverse effect is evaluated and prioritised. Finally, for those NERCs where there is sufficient proof of the causality with an adverse effect or the need for action, an analysis of possible appropriate regulatory risk management options is made. With this approach, NERCs can be efficiently identified with timely recommendations of follow-up steps, to reduce or eliminate the risk of the substance.

Keywords: exposure, prioritisation, evaluation, expert group, new or emerging risks of chemicals, NERCs, new risks, emerging risks, workers, consumers, environment, identification
