CNKI Scholar

Charakteristika

- Čínský portál pro vyhledávání různých informačních zdrojů.
- Poskytuje metadata asi od 500 vydavatelů ze 60 zemí.
- Obsahuje asi 100 milionů záznamů článků.
- Lze využít překladač z čínštiny do češtiny či angličtiny.
- Je nutné ukládat vybrané záznamy z každé stránky zvlášť.

CNKI Scholar – stávající verze

Vyhledávací možnosti

Nápověda v angličtině není k dispozici.

Ze zkušeností z práce s tímto portálem vyplývá:

- Lze používat oboustranné horní uvozovky pro frázi, např.: "digital literacy" .
- Nelze používat znaky pro rozšíření.

CNKI Scholar – současná verze

DOI: 10.1002/jsfa.6046

英文摘要: *BACKGROUND: Waste from public green areas represents large quantities of grassy phytomass. The grass is usually utilised by composting, combustion or anaerobic fermentation. However, the classical composts are time-demanding, the quality of accelerated composts is low, combustion is under increasing criticism and conventional anaerobic fermentation requires high investment. RESULTS: A new method of two-fraction anaerobic fermentation of grass waste consisting from a hot maceration, up-flow anaerobic sludge blanket reactor, steam explosion, horizontally stirred batch anaerobic fermentors and a charcoal kiln, all run on waste heat from a co-generation unit was investigated on a commercial scale. CONCLUSION: The results shows that due to faster energy utilisation the two-fraction technology r ...*

Animals as sentinels of chemical terrorism agents: an evidence-based review.
Rabinowitz Peter;; Wiley James;; Odofin Lynda;; Wilcox Matthew;; Dein F Joshua
2008
2008-02-09

Animals;; Chemical Terrorism;; Chemical Warfare Agents;; Disease Susceptibility;; Evidence-Based Medicine;; Humans;; Sentinel Surveillance

The goal of this systematic review was to identify evidence that animals could serve as sentinels of an attack with a chemical terrorism agent. The biomedical literature was systematically searched for evidence that wild or domestic animals exposed to certain chemical weapons of terrorism had either greater susceptibility, shorter latency period, or increased exposure risk versus humans. Additionally, we searched for documented reports of such animals historically serving as sentinels for chemical warfare agents. For a small number of agents, there was limited evidence that domestic and/or wild animals could provide sentinel information to humans following an airborne attack with chemical agents, usually related to increased potential for environmental exposure. Some of this evidence was based on anecdotal case reports, and in many cases high quality chemical terrorism agent evidence regarding comparative susceptibility, exposure, and latency between humans and sentinel animal species was not found. Currently, there is insufficient evidence for routine use of animals as sentinels for airborne chemical warfare agents. At the same time, Poison Center surveillance systems should include animal calls, and greater communication between veterinarians and physicians could help with preparedness for a chemical terrorism attack. Further analysis of comparative chemical warfare agent toxicity between sentinel animal species and humans is needed.

Capnography as a rapid assessment and triage tool for chemical terrorism.
Krauss Baruch
2005
2005-08-13

Capnography;; Chemical Terrorism;; Chemical Warfare Agents;; Humans;; Triage

The assessment and triage of victims of chemical terrorism in the emergency department and the prehospital setting has become an important priority. This article proposes the use of capnography as a prehospital assessment and triage tool for monitoring victims of chemical terrorism and for critically ill patients. Capnography provides the ABCs in less than 15 seconds and identifies the common complications of chemical terrorism. Further, the reliability of capnography is not affected by motion artifact or low perfusion and it is accurate and reliable in actively seizing patients. Emergency departments and emergency medical services systems should consider adding capnography to their chemical terrorism education and training.

{Title}: Scale development on consumer behavior toward counterfeit drugs in a developing country: a quantitative study exploiting the tools of an evolving paradigm.
{Author}: Alfadl Abubakr A
{Author}: B Mohamed Ibrahim Mohamed Izham
{Author}: Ahmad Hassali Mohamed Azmi
{Journal}: BMC public health
{Year}: 2013
{Issue}: 1
{Pages}: 829
{Keywords}:
{Abstract}: Although desperate need and drug counterfeiting are linked in developing countries, little research has been carried out to address this link, and there is a lack of proper tools and methodology. This study addresses the need for a new methodological approach by developing a scale to aid in understanding the demand side of drug counterfeiting in a developing country.;;The study presents a quantitative, non-representative survey conducted in Sudan. A face-to-face structured interview survey methodology was employed to collect the data from the general population (people in the street) in two phases: pilot (n = 100) and final survey (n = 1003). Data were analyzed by examining means, variances, squared multiple correlations, item-to-total correlations, and the results of an exploratory factor analysis and a confirmatory factor analysis.;;As an approach to scale purification, internal consistency was examined and improved. The scale was reduced from 44 to 41 items and Cronbach's alpha improved from 0.818 to 0.862. Finally, scale items were assessed. The result was an eleven-factor solution. Convergent and discriminant validity were demonstrated.;;The results of this study indicate that the "Consumer Behavior Toward Counterfeit Drugs Scale" is a valid, reliable measure with a solid theoretical base. Ultimately, the study offers public health policymakers a valid measurement tool and, consequently, a new methodological approach with which to build a better understanding of the demand side of counterfeit drugs and to develop more effective strategies to combat the problem.

{Title}: Substandard and counterfeit medicines: a systematic review of the literature.
{Author}: Almuzaini Tariq
{Author}: Choonara Imti
{Author}: Sammons Helen
{Journal}: BMJ open
{Year}: 2013
{Issue}: 8
{Pages}: e002923
{Keywords}:
{Abstract}: To explore the evidence available of poor-quality (counterfeit and substandard) medicines in the literature.;;Systematic review.;;Databases used were EMBASE, MEDLINE, PubMed and the International Pharmaceutical Abstracts, including articles published till January 2013.;;Prevalence studies containing original data. WHO definitions (1992) used for counterfeit and substandard medicines.;;Two reviewers independently scored study methodology against recommendations from the MEDQUARG Checklist. Studies were classified according to the World Bank classification of countries by income.;;Data extracted: place of study; type of drugs sampled; sample size; percentage of substandard/counterfeit medicines; formulations included; origin of the drugs; chemical analysis and stated issues of counterfeit/substandard medicines.;;44 prevalence studies were identified, 15 had good methodological quality. They were conducted in 25 different countries; the majority were in low-income countries (11) and/or lower middle-income countries (10). The median prevalence of substandard/counterfeit medicines was 28.5% (range 11-48%). Only two studies differentiated between substandard and counterfeit medicines. Prevalence data were limited to antimicrobial drugs (all 15 studies). 13 studies involved antimalarials, 6 antibiotics and 2 other medications. The majority of studies (93%) contained samples with inadequate amounts of active ingredients. The prevalence of substandard/counterfeit antimicrobials was significantly higher when purchased from unlicensed outlets (p<0.000: 95% CI 0.21 to 0.32). No individual data about the prevalence in upper middle-income countries and

Analysis of effective factors on agricultural water management in Iran

Authors: Yaser Feizabadi; Effat Masomi Gorji

Affiliations: Islamic Azad University , Qaemshahr Branch, Department of Agricultural Economics , Mazandaran Province, 4761633916 Qaemshahr , Iran<country country="IR" />

DOI: 10.2478/jwld-2018-0040

Keywords: Agriculture; Factor analysis; Iran; Water management

Abstracts: Abstract The aim of this study was to analyse the factors affecting agricultural water management in Iran based on irrigation experts' point of view using factor analysis approach. The results indicated that conservation of modern irrigation equipment, promoting farmers' knowledge, creating a watercourse (surface water collection), imposing a ban on digging new wells and educating the effectiveness of pressurized irrigation system were all known as the most important factors affecting agricultural water management. Moreover, factor analysis results showed that five factors influencing agricultural water management (institutional and legislative, educational and promotional, economic, technical and farming system) explained 64.29% of the total variance. At the end, some policy suggestions were provided in order to improve agricultural water management in Iran.

Introduction

As a leading Chinese academic information aggregator worldwide, CNKI has expanded its international service by working with more than 500 international publishers from 60 countries and regions. Currently, over 100 million articles from 60,000 titles of journals are indexed by CNKI, overlapping with 94% of JCR cited journals and 80% in Scopus.

All indexed resources are unified under seven categories of natural science, social science, humanities, engineering technology, medicine, agricultural science and philosophy. Basic information for each journal can be quickly and freely accessed by readers, including current / former titles name, ISSN/E-ISSN, publishing frequency, initial issue, publisher / aggregator homepage, access, subject, publication, publication territory, language, etc.

Besides, lists for volumes, online-first and open access content are available. Most of archives are back to initial issue, with the oldest one in the 19th century. [Enter >](#)
