

DOAJ

Directory of Open Access Journals

- <https://www.doaj.org>
- Bezplatný přístup do plných textů téměř 16 000 recenzovaných časopisů ze 124 zemí.
- Možnost hledání článků z 12 000 titulů.
- Bezplatný přístup k téměř 6 milionům článků v plném textu.

DOAJ

Vyhledávací možnosti

Dle stručné nápovědy v databázi

- lze používat oboustranné horní uvozovky pro frázi v názvech časopisů a článků,
- dvě a více slov v dotazu hledá systém jako frázi.

Dle zkušeností lze používat

- booleovské operátory AND a OR, které je nutné psát velkými písmeny,
- hvězdičku pro pravostranné rozšíření jako náhradu za neomezený počet znaků,
- otazník jako náhradu za žádný či jeden znak.

Vyhledávání

The screenshot shows the DOAJ website in a web browser. The browser's address bar displays 'doaj.org'. The website's header includes the DOAJ logo, navigation links for 'SEARCH', 'DOCUMENTATION', and 'ABOUT', and buttons for 'SUPPORT' and 'APPLY'. A search bar contains the query 'nano* AND health* AND risk*'. A dropdown menu is open, showing search filters: 'Abstract' (selected), 'In all fields', 'Title', 'Subject', and 'Author'. To the right of the search bar is a red 'SEARCH' button. Below the search bar, statistics are displayed: 80 LANGUAGES, 124 COUNTRIES REPRESENTED, 5,983 JOURNALS WITHOUT APCs, and 5,716,636 ARTICLE RECORDS.

Abstract

Over the last decades there has been a tremendous volume of research efforts focused on engineering silver-based (nano)materials. The interest in silver has been mostly driven by the element capacity to kill pathogenic bacteria. In this context, the main area of application has been medical devices that are at significant risk of becoming colonized by bacteria and subsequently infected. However, silver nanomaterials have been incorporated in a number of other commercial products which may or may not benefit from antibacterial protection. The rapid expansion of such products raises important questions about a possible adverse influence on human health. This review focuses on examining currently available literature and summarizing the current state of knowledge of the impact of silver (nano)materials on the immune system. The review also looks at various surface modification strategies used to generate silver-based nanomaterials and the immunomodulatory potential of these materials. It also highlights the immune response triggered by various silver-coated implantable devices and provides guidance and perspective towards engineering silver nanomaterials for modulating immunological consequences.
