It has been difficult to produce shoes for large dogs or rescue dogs. Dog shoes produced using only conventional sewing techniques are prone to rips and holes. The use of a synthetic resin can make dog shoes durable and make possible to produce shoes that large dogs or rescue dogs can use.

[0003] Otic compositions comprising ethylenediamine-tetraacetic acid (hereinafter "EDTA") and tromethamine or TRIS(hydroxymethyl)aminomethane ("TRIS") are known. See U.S. Pat. No. 6,538,155. Compositions comprising combinations of EDTA and TRIS are known. Such compositions (hereinafter "EDTA-TRIS compositions") are useful as antimicrobial agents when used alone or in combination with other antimicrobial agents, such as antibiotics. Synergistic activity was observed when EDTA-TRIS compositions plus amikacin and EDTA-TRIS compositions plus neomycin were tested against Staphylococcus intermedius, Proteus mirabilis, Pseudomonas aeruginosa and Escherichia coli. Sparks et al, "Antimicrobial effect of combinations of EDTA-TRIS and amikacin or neomycin on the microorganisms associated with otitis externa in dogs", Vet. Res. Commun., 1994, Vol. 18 (4), pp. 241-9. There remains, however, a need for therapeutically effective compositions comprising at least one antimicrobial, in particular, at least one antiseptic for treating other animal disorders, which include disorders of the eye and oral cavity in a variety of animals, as well as disorders of the oropharyngeal and/or guttural pouch in equines.

[0004] Tear staining is a common problem and concern of pet owners.
