The screenshot shows the Microsoft Academic Search website. The search query is "home nursing care seniors". The search results are filtered by the "Medicine" field of study, which is highlighted with a red circle and an arrow. A red oval highlights the "Limit my searches in the following fields of study" section, which includes a list of fields with checkboxes. The "Medicine" checkbox is checked. Below the filters, a list of authors is displayed, including Richard S J Frackowiak (Rich), Karl Friston, Shizuo Akira (審良静男), Christopher D. Frith, and Walter C. Willett. The interface also shows a sidebar with "All Fields of Study" and a top navigation bar with various icons and a search button.

Bibliografický záznam

The screenshot shows a web browser window displaying a Microsoft Academic Search publication page. The browser's address bar shows the URL: `academic.research.microsoft.com/Publication/49115090/evaluation-of-aging-in-place-model-with-home-care-services-and-registered-nurse-care-coordin`. The browser interface includes a search bar, navigation buttons, and a toolbar with social media and utility icons. The page content features the Microsoft Academic Search logo, a search bar, and a list of keywords on the left. The main content area displays a publication entry for "Evaluation of aging in place model with home care services and registered nurse care coordination in senior housing" by Marilyn J. Rantz et al. The entry includes a brief abstract, journal information, and a DOI. A citation context snippet is visible at the bottom of the page.

Evaluation of aging in place model with home care services and registered nurse care coordination in senior housing (Citations: 1) [Export](#)

Marilyn J. Rantz, Lorraine Phillips, Myra Aud, Lori Popejoy, Karen Dorman Marek, Lanis L. Hicks, Isabella Zaniletti, Steven J. Miller

A state-sponsored evaluation of **aging in place** (AIP) as an alternative to **assisted living** and **nursing home** has been underway in Missouri. Cost, physical, and **mental health** assessment data reveal the cost-effectiveness and positive health measures of AIP. Findings of the first four years of the AIP evaluation of two long-term care settings in Missouri with **registered nurse** care coordination are compared with national data for traditional long-term care. The combined care and housing cost for any resident who received care services beyond base services of AIP and who qualified for **nursing home** care has never approached or exceeded the cost of **nursing home** care at either location. Both **mental health** and **physical health** measures indicate the health restoration and independence effectiveness of the AIP model for long-term care.

The screenshot shows the Microsoft Academic Search profile for Antonin Holy. The browser address bar displays the URL: <http://academic.research.microsoft.com/Author/18580226/antonin-holy>. The page header includes the Microsoft Academic Search logo and an "Advanced Search" button. The profile information for Antonin Holy (Antonín Holý) is displayed, including his affiliation with the Academy of Sciences of the Czech Republic, 414 publications, 1642 citations, and fields of interest in Analytical Chemistry, Pharmacology, and Organic Chemistry. A line graph shows cumulative publications (blue) and citations (orange) from 1976 to 2012. The graph shows a steady increase in both metrics over time, with citations reaching 1642 and publications reaching 414 by 2012. The graph also includes a legend for "Cumulative" and "Annual" data, and a "Sort by: Year" dropdown menu.

A novel selective broad-spectrum anti-DNA virus agent (Citations: 174) [Export](#) [Edit](#)

Erik De Clercq, Antonin Holý, Ivan Rosenberg, Takashi Sakuma, Lian Jin Liu, Balzarini, Patrick C. Maudgal

A new compound has been found, (S)-9-(3-hydroxy-2-phosphonyl-methyl)adenine ((S)-HPMPA), that has potent and selective activity against a broad spectrum of DNA viruses, including herpes simplex virus (types 1 and 2); varicella zoster virus; thymidine kinase-deficient (TK-) mutants of herpes simplex and varicella zoster virus; human cytomegalovirus; phocid, simian, suid, bovid and equid herpesviruses; African swine fever virus; vaccinia virus; and human adenoviruses. It is also active against retroviruses. We also report that, in mice and rabbits in vivo, the compound is effective against both local and systemic infections with herpes simplex virus type 1, including herpetic keratitis caused by a TK- mutant which is resistant to the classical anti-herpes drugs.
