# OpenAIRE

## Charakteristika

- **Open Access Infrastructure for Research in Europe.**
- Nástupce projektu DRIVER. Projekt zahrnuje několik částí.
- Portál umožňuje vyhledávání ve 27 milionech záznamů asi ze 13 000 zdrojů převážně s otevřeným přístupem.
- Složité dotazy pomocí operátorů vytvářet v pokročilém rozhraní.

## Cesta k vyhledávací masce

The screenshot shows the OpenAIRE website interface. The browser's address bar displays <https://www.openaire.eu>. The navigation menu includes 'EXPLORE', 'PROVIDE', 'CONNECT', 'MONITOR', and 'DEVELOP'. The 'EXPLORE' menu item is highlighted with a red box, and a search bar is visible below it with the text 'Search in OA. Link your research'. The main content area features the OpenAIRE logo and the headline 'OpenAIRE becomes an organisation'. Below the headline, it states 'An EU organisation to facilitate openness in scholarly communication' and includes a 'LEARN MORE' button. The background of the main content area is a large, colorful network graph.

### U.S. Honey Supply Chain: Structural Change, Promotions and the China Connection

Article, Preprint OPEN

Ward, Ronald W. ; Boynton, Bruce (2009)

**Subject:** Agribusiness, Agricultural and Food Policy, Farm Management, Food Consumption/Nutrition/Food Safety, Research and Development/Tech Change/Emerging Technologies, Risk and Uncertainty, | honey, demand, imports, generic promotions, Food Consumption/Nutrition/Food Safety, Research Methods/ Statistical Methods,

Among almost all natural food goods, honey is probably one of the most unique in terms of its production history and importance. It is often a by-product from the primary function of pollination by bees. Honey color and flavor is directly related to the types of plants being pollinated. For some agricultural products, honey has limited economic value beyond the food source for the bees, while for others, such as citrus, the value of the honey is much greater since the flavor, texture, and color yields highly desirable honey attributes. Bee pollination is essential to almost every sector of agriculture. For some agriculture goods, beekeepers recoup their returns through payment for the pollination services. When the pollination leads to desirable honey varieties, the value of the honey serves as the indirect payment for pollination services. Hence, the economic viability of the honey market is an essential element for supporting the bee colonies needed for pollination. A weak honey market should directly affect beekeepers' abilities to provide essential pollination services to all agriculture sectors. Efforts to enhance the demand for honey clearly have implications far beyond just the value of the honey since the cost of pollination would be significantly higher if it were not for the sales of honey.

## Bibliografický záznam

The screenshot shows a web browser displaying the OpenAIRE search results for the publication 'Considering a war with Iran'. The page includes a navigation bar with 'EXPLORE', 'PROVIDE', 'CONNECT', 'MONITOR', and 'DEVELOP' options. The main content area features the OpenAIRE logo, the title 'Considering a war with Iran', and a 'Metrics' tab highlighted with a red box. Below the title, there are buttons for 'Book', 'English', and 'OPEN'. The publisher is listed as CISD, and the subject is 8670 | 4800. A description of the paper is provided. On the right side, there are sections for 'Share - Bookmark', 'Download from' (SOAS Research Online via CORE), and 'Cite this publication'. A table at the bottom shows the number of views and downloads from various content providers.

## Pokročilé vyhledávání

The screenshot shows the OpenAIRE Advanced Search page. The search criteria are: Subject: biomass and Subject: burning. A dropdown menu is open for the second search field, showing various search fields like Title, Author, Subject, etc. Red arrows point from text boxes to the dropdown menu and the search field controls. The text boxes contain the following text:

- Výběr pole a operátoru** (Selection of field and operator)
- Přidávání a ubírání polí** (Adding and removing fields)

The page also displays search results, including a link to "Biomass power plant feedstock procurement: Modeling transportation cost zones and the potential for competition" and a list of authors: Kizha., Anil R; Han, Han-Sup; Montgomery, Timothy; Hohl, Aaron; (2015).

## Pokročilé vyhledávání – časové zpřesnění dotazu

The screenshot shows the OpenAIRE Advanced Search interface. The search query is "biomass" under the "Subject" field. The "Publication Date" field is highlighted with a red box, and a dropdown menu is open, showing various time-based filters. The "in the last 5 years" option is selected and highlighted in blue. The search results show 1,487 publications, page 1 of 149. The first result is "Production and management of sugarcane biomass: process optimization" by de Oliveira Florentino, Helenice; Vaz Pato, Margarida; Jones, Dylan Francis; Cantane, Daniela; (2015). The second result is "Biomass power plant feedstock procurement: Modeling transportation cost zones and the potential for competition" by Kizha, Anil R; Han, Han-Sup; Montgomery, Timothy; Hohl, Aaron; (2015).
