P0800657: Abstract as published - English (HTML)

The invention is a system, which is suitable, when installed in a game table, for treating unlimited number of "touches" and running several (at least five different) games.

The main point of the invention is that four projectors (1) controlled by a computer (8) projects the graphical images of game programs to a projector screen (3) stretched between an upper glass plate (5) and a lower glass plate (4) in the horizontal plane of the table (7).

On a Multi Zerotouch Multiplayer electronic game table, the player reflects the light coming from an infrared lamp (10) by touching the upper glass plate (5) and the player disconnects the light coming from an edge illuminating infrared lamp (11) by touching the upper glass plate (5). The coordinates of the touches are sensed and sent to the computer (8) by an infrared camera (9).

The players may enter the game by ten fingerprint reader and/or magnet card reader installed in the armrest (6).
