Latest News

Policy updates: open access statement and user registration
Open Access Statement Until recently, DOAJ has insisted that journals state very clearly on their web site a full and detailed open access statement, preferably one that follows closely the Budapest Open Access Initiative definition. From 8th September, DOAJ will accept a short open access statement—even as short as 'This journal is open access.'—but ONLY [...] [Read More...](#)

EDITORIAL INFORMATION

[Abstract](#) | [Full Text](#)

<p>Abstract</p> <p>Background</p> <p>Breast cancer is the most common cancer among women in both the developed and the developing world. The incidence of breast cancer in Karachi, Pakistan is 69.1 per 100,000 with breast cancer presentation in stages III and IV being common ($\geq 50\%$). The most pragmatic solution to early detection lies in breast cancer education of women. Nurses constitute a special group having characteristics most suited for disseminating breast cancer information to the women. We assessed the level of knowledge of breast cancer risk factors among registered female nurses in teaching hospitals of Karachi. We also identified whether selected factors among nurses were associated with their knowledge of breast cancer risk factors, so that relevant measures to improve knowledge of nurses could be implemented.</p> <p>Methods</p> <p>A cross-sectional survey was conducted in seven teaching hospitals of Karachi using stratified random sampling with proportional allocation. A total of 609 registered female nurses were interviewed using a structured questionnaire adapted from the Stager's Comprehensive Breast Cancer Knowledge Test. Knowledge of breast cancer risk factors was categorized into good, fair and poor categories. Ordinal regression was used
