Private investment under macroeconomic a

Klaus Schmidt-Hebbel, Tobias Muller

Last edited: 2016-07-21 (UTC)

A significant domestic counterpart of Morocco's vigorous external adjustment in the eighties was a decline in fixed capital formation, of which the private sector bore a sizable share. The authors focus on the causes of declining private investment and on the policies required to reverse this trend. ...

Welcome to the Theses Canada Portal

Library and Archives Canada has temporarily suspended thesis harvesting from university institutional repositories in order for technological improvements to be made to its systems. Users of the Theses Canada Portal will be notified when harvesting recommences.

Theses Canada, launched in 1965 at the request of the deans of Canadian graduate schools, is a collaborative program between Library and Archives Canada (LAC) and nearly 70 universities accredited by [Universities Canada](#). It strives to:

- acquire and preserve theses and dissertations from participating universities
- provide free access to Canadian electronic theses and dissertations in the collection
- facilitate access to non-digital theses and dissertations in the collection.

The collection contains both microfiche and electronic theses and dissertations that are for personal or academic research purposes. Any commercial use, publication, reproduction or lending of this material is strictly prohibited.

NAME(S): *Carty, Adele Pauline

TITLE(S): Child Health in the Province of Ontario [electronic resource] : Establishing baselines for reproductive health and vaccine preventable diseases

PUBLISHER: Guelph : University of Guelph, 2015.

NOTES: Thesis (Master of Science)--University of Guelph, 2015
Includes bibliographical references.
Type of computer file: application/pdf

STUDENT ABSTRACT: This thesis was an investigation of child health in the province of Ontario through the lens of reproductive health, and vaccine preventable diseases (VPD). Two studies were conducted; the first examined the association between pre-pregnancy BMI and the risk of developing gestational diabetes mellitus (GDM) and gestational hypertension (GH) in a rural Southern Ontario community hospital. In multivariable logistic regression, pre-pregnancy BMI was significantly associated with the risk of developing both GDM and GH. The second study examined immunization compliance for measles, mumps, and rubella among children seven years of age residing in the city of Guelph. A significant difference was identified in overall immunization compliance to National Advisory Committee on Immunization Standards (NACI) between the city of Guelph's priority neighbourhoods, and non-priority neighbourhoods. These findings will aid in identifying populations at risk for the development of poor child health outcomes, for whom public health initiatives should be targeted.

SUBJECTS: gestational diabetes mellitus
gestational hypertension
pre-pregnancy body mass index
measles
mumps
rubella
vaccine compliance

NSDL at Niscair >

National Science Digital Library

National Science Digital Library (NSDL) aims at providing comprehensive S&T information to students of science, engineering and technology in the country. Begun as a Tenth Five Year Plan Network Project of Council of Scientific and Industrial Research (CSIR), NSDL is the only one of its kind that provides curriculum based content to address the information needs of the undergraduate students of science. The content creation and development for NSDL has gone through rigorous procedures to make available quality content for the students. Authored by eminent teachers and validated by renowned faculty in Indian universities and colleges, NSDL envisages to bring finest content to the students. The discussion forum has been provided for interactions amongst NSDL users.

The purpose of TEL (thèses-EN-ligne) is to facilitate the self archiving of thesis manuscripts, which are important documents for direct scientific communication between scientists. TEL is actually a particular "environment" of HAL. It therefore has the same objective: make scientific documents available to scientists all around the world, rapidly and freely, but with a restriction to PHD thesis and habilitations (HDR, in countries where habilitations exist). CCSD does not make any scientific evaluation of the thesis that are submitted, since this is the responsibility of the university professors in the examination board.

TEL is also accessible through OAI (Open Archives Initiative), tools and the OAI-PMH protocol, with the URL api.archives-ouvertes.fr/oai/tel

Alexandre Sylvestre ¹ Details

1 LCE - Laboratoire Chimie de l'environnement

en **Abstract** : In order to limit the impact of air quality on human health, public authorities need reliable and accurate information on the sources contribution. So, the identification of the main sources of PM2.5 is the first step to adopt efficient mitigation policies. This work carry out in this thesis take place in this issue and was to determine the main sources of PM2.5 inside an industrial area. To determinate the main sources of PM2.5, two campaigns were lead to collect daily PM2.5 to: 1/ determine the enrichment of atmospheric pollutants downwind from the main industrial activities and 2/ collect PM2.5 in urban areas characteristic of the population exposition. Results allowed to obtain very representative profiles for the main industrial activities implanted inside the studied area. ME-2 analysis, combined to radiocarbon measurements, allowed to highlight the very high impact of Biomass Burning sources for all the PM2.5 pollution events recorded from early autumn to March. This study showed that industrial sources, even if they are the major sources during spring and summer, are not the major PM2.5 driver. However, this study highlights that industrial sources impact significantly the aerosol population (size, composition, etc.) in the studied area.

ORGANIC POLLUTION OF RIVERS : COMBINED THREATS OF... (2017)
OPEN ACCESS

Main

Title	Organic pollution of rivers : Combined threats of urbanization, livestock change
Published in	Scientific Reports, Vol. 7. ISSN 2045-2322.
Author	Wen, Y., Schoups, G.H.W., van de Giesen, N.C.
Date	2017-02-23
Reference(s)	Water Resources (C CITG WM WRS), General
Language	English
Type	Article
Abstract	Organic pollution of rivers by wastewater discharge from human activities negatively impacts people and ecosystems. Without treatment, pollution control relies on a combination of natural degradation and dilution by natural runoff to reduce downstream effects. We quantify here for the first time the global sanitation crisis through its impact on organic river pollution from the threats of (1) increasing wastewater discharge due to urbanization and intensification of livestock farming, and (2) reductions in river dilution capacity due to climate change and water extractions. Using in-stream Biochemical Oxygen Demand (BOD) as an overall indicator of organic river pollution, we calculate historical (2000) and future (2050) BOD concentrations in global river networks. Despite significant self-cleaning capacities of rivers, the number of people affected by organic pollution (BOD >5 mg/l) is projected to increase from 1.1 billion in 2000 to 2.5 billion in 2050. With developing countries disproportionately affected, our results point to a growing need for affordable wastewater solutions.

► Description

IntroductionDipeptidyl peptidase-4 (DPP-4) inhibitors reduce blood glucose in a dose-dependent manner, but the dose-dependent effect relationship between DPP-4 inhibitors and atherosclerosis has not been investigated.MethodsPatients with type 2 diabetes mellitus (T2DM) treated with insulin were randomized to the sitagliptin (n = 137) or conventional treatment group (n = 137). In the sitagliptin group, each investigator was allowed to adjust the sitagliptin dose to avoid hypoglycemia. In this post hoc analysis, subjects in the sitagliptin group were divided into two groups based on the average dose of sitagliptin during the study period: greater than or equal to median (higher sitagliptin dose group) or less than median (lower sitagliptin dose group).ResultsIn this study, subjects were divided into three groups: the conventional treatment group (n = 137), lower sitagliptin dose group (n = 42), and higher sitagliptin dose group (n = 95). The higher sitagliptin dose group had a significantly larger reduction in HbA1c ($-0.62 \pm 1.05\%$) than the conventional treatment group ($-0.20 \pm 0.91\%$, $P = 0.007$). Over 104 weeks, the higher sitagliptin dose significantly reduced the mean intima media thickness-common carotid artery (IMT-CCA) and left max-IMT-CCA relative to baseline. In addition, the higher sitagliptin dose significantly inhibited the progression in mean-IMT-CCA compared with conventional treatment. Multiple linear regression analysis showed that changes in mean-IMT-CCA and left max-IMT-CCA decreased with higher sitagliptin dose.ConclusionsAddition of sitagliptin to insulin therapy might attenuate the progression of atherosclerosis in patients with T2DM in a dose-dependent manner.

Note and Description

Now-a-days many developing countries are suffering from high motorization trend that has produced several unwanted by products. Though private vehicles provide high level of access and freedom but have enormous associated risks in the form traffic congestion and accidents, noise and air pollution and high energy consumption. Admitting these facts, many developing countries have initiated efficient mass transit systems to relieve these side effects. These systems provide a comfortable, safer and efficient services and so can be fairly preferred over private vehicles. Also the target of these systems is same as to cut down the private vehicle usage by attracting commuters from diverse social income classes other than low ones. However most of these systems are planned and designed independently, leading to the difficulties in accessing and egressing. Accessibility of these systems, which is one of the basic components of performance measure used for transit (Wardman 2004), is still crucial in most of the developing countries. Lack of any regular feeder services creates gap between ones'

抄録	Now-a-days many developing countries are suffering from high motorization trend that has produced several unwanted by products. Though private vehicles provide high level of access and freedom but have enormous associated risks in the form traffic congestion and accidents, noise and air pollution and high energy consumption. Admitting these facts, many developing countries have initiated efficient mass transit systems to relieve these side effects. These systems provide a comfortable, safer and efficient services and so can be fairly preferred over private vehicles. Also the target of these systems is same as to cut down the private vehicle usage by attracting commuters from diverse social income classes other than low ones. However most of these systems are planned and designed independently, leading to the difficulties in accessing and egressing. Accessibility of these systems, which is one of the basic components of performance measure used for transit (Wardman 2004), is still crucial in most of the developing countries. Lack of any regular feeder services creates gap between ones' origin and mass transits station that cause dissatisfaction to commuters and they lose patronage towards these systems. Currently paratransit is emerging as dominating feeder mode in several developing countries and connecting commuters from residence to public transport systems. However these paratransit have certain service areas and potential passengers. Also most of these are informal, not well organized and unsatisfactory and their movement is restricted to certain parts of the cities. Therefore a detailed evaluation is essential, also from commuters' viewpoint, before implementing them as feeder. Unlike paratransit, a regular feeder bus, a form of public transport, can provide safer, comfortable and reliable service and will be free from the enormous risks as associated with paratransit. However a regular feeder bus requires a

Fraunhofer-Publica

Základní vyhledávání

The screenshot displays the Fraunhofer-Publica website in a web browser. The browser's address bar shows the URL `publica.fraunhofer.de/starweb/pub09/en/index.htm`. The website's header includes the Fraunhofer logo and the word "Publica". A sidebar on the left contains a menu with items like "Search Form" and "Current Publications", with "Search Form" highlighted by a red dashed box. The main content area features a large image of a computer mouse on a desk. Below the image is a search bar containing the text "nano* toxi*" and a "Search" button, both enclosed in a red solid box. Below the search bar, the text "use the asterisk (*) as a truncation symbol" is visible. The page also includes a section titled "Publication Database of the Fraunhofer-Gesellschaft" with a brief description of the database's contents. The footer contains copyright information and links for "Contact", "Imprint", and "Data Protection".

Abstract
The use of silver nanoparticles (AgNPs) in consumer products such as textiles leads to their discharge into wastewater and consequently to a transfer of the AgNPs to soil ecosystems via biosolids used as fertilizer. In urban wastewater systems (e.g., sewer, wastewater treatment plant [WWTP], anaerobic digesters) AgNPs are efficiently converted into sparingly soluble silver sulfides (Ag₂S), mitigating the toxicity of the AgNPs. However, long-term studies on the bioavailability and effects of sulfidized AgNPs on soil microorganisms are lacking. Thus we investigated the bioavailability and long-term effects of AgNPs (spiked in a laboratory WWTP) on soil microorganisms. Before mixing the biosolids into soil, the sludge was either anaerobically digested or directly dewatered.
