Welcome to the Theses Canada Portal

i Library and Archives Canada has temporarily suspended thesis harvesting from university institutional repositories in order for technological improvements to be made to its systems. Users of the Theses Canada Portal will be notified when harvesting recommences.

Theses Canada, launched in 1965 at the request of the deans of Canadian graduate schools, is a collaborative program between Library and Archives Canada (LAC) and nearly 70 universities accredited by [Universities Canada](#). It strives to:

- acquire and preserve theses and dissertations from participating universities
- provide free access to Canadian electronic theses and dissertations in the collection
- facilitate access to non-digital theses and dissertations in the collection.

The collection contains both microfiche and electronic theses and dissertations that are for personal or academic research purposes. Any commercial use, publication, reproduction or lending of this material is strictly prohibited.

NAME(S): *Carty, Adele Pauline

TITLE(S): Child Health in the Province of Ontario [electronic resource] : Establishing baselines for reproductive health and vaccine preventable diseases

PUBLISHER: Guelph : University of Guelph, 2015.

NOTES: Thesis (Master of Science)--University of Guelph, 2015
Includes bibliographical references.
Type of computer file: application/pdf

STUDENT ABSTRACT: This thesis was an investigation of child health in the province of Ontario through the lens of reproductive health, and vaccine preventable diseases (VPD). Two studies were conducted; the first examined the association between pre-pregnancy BMI and the risk of developing gestational diabetes mellitus (GDM) and gestational hypertension (GH) in a rural Southern Ontario community hospital. In multivariable logistic regression, pre-pregnancy BMI was significantly associated with the risk of developing both GDM and GH. The second study examined immunization compliance for measles, mumps, and rubella among children seven years of age residing in the city of Guelph. A significant difference was identified in overall immunization compliance to National Advisory Committee on Immunization Standards (NACI) between the city of Guelph's priority neighbourhoods, and non-priority neighbourhoods. These findings will aid in identifying populations at risk for the development of poor child health outcomes, for whom public health initiatives should be targeted.

SUBJECTS: gestational diabetes mellitus
gestational hypertension
pre-pregnancy body mass index
measles
mumps
rubella
vaccine compliance

NSDL – materiály pro vzdělávání a výuku nižšího stupně

<https://nsdl.oercommons.org/>

The screenshot shows the NSDL website in a web browser. The browser's address bar displays the URL <https://nsdl.oercommons.org/>. The website's header features the NSDL logo on the left, which includes the text "NSDL" in large, colorful letters and "THE NATIONAL SCIENCE DIGITAL LIBRARY" below it. On the right side of the header, there are links for "Register Now!" and "Log In". Below the header, a navigation bar contains several menu items: "Browse Providers", "Education Level" (with a dropdown arrow), "Resource Type" (with a dropdown arrow), "Subject" (with a dropdown arrow), "Standards" (with a dropdown arrow), and "About" (with a dropdown arrow). The main content area has a background image of Earth from space. It features the title "National Science Digital Library" in large white text, followed by the tagline "Serving science, technology, engineering, and mathematics education" in a smaller, italicized font. Below this is a search interface with a text input field containing "terror*", a magnifying glass icon, and three dropdown menus labeled "Subject", "Education Level", and "Standard". A green "Search" button is positioned to the right of these fields. A grey button with the text "Fine tune your search with our advanced search." is located below the search fields. At the bottom of the page, the text "Extensive Library, Powerful Findability" is displayed in white. The bottom of the screenshot shows a dark blue footer area with faint icons of a book, a magnifying glass, and a document.

Home

The purpose of TEL (thèses-EN-ligne) is to facilitate the self archiving of thesis manuscripts, which are important documents for direct scientific communication between scientists. TEL is actually a particular "environment" of HAL. It therefore has the same objective: make scientific documents available to scientists all around the world, rapidly and freely, but with a restriction to PHD thesis and habilitations (HDR, in countries where habilitations exist). CCSD does not make any scientific evaluation of the thesis that are submitted, since this is the responsibility of the university professors in the examination board.

TEL is also accessible through OAI (Open Archives Initiative), tools and the OAI-PHM protocol, with the URL api.archives-ouvertes.fr/oai/tel

en Caractérisation de l'aérosol industriel et quantification de sa contribution aux PM 2.5 atmosphériques

fr

Alexandre Sylvestre ¹ Details

1 LCE - Laboratoire Chimie de l'environnement

en **Abstract** : In order to limit the impact of air quality on human health, public authorities need reliable and accurate information on the sources contribution. So, the identification of the main sources of PM2.5 is the first step to adopt efficient mitigation policies. This work carry out in this thesis take place in this issue and was to determine the main sources of PM2.5 inside an industrial area. To determinate the main sources of PM2.5, two campaigns were lead to collect daily PM2.5 to: 1/ determine the enrichment of atmospheric pollutants downwind from the main industrial activities and 2/ collect PM2.5 in urban areas characteristic of the population exposition. Results allowed to obtain very representative profiles for the main industrial activities implanted inside the studied area. ME-2 analysis, combined to radiocarbon measurements, allowed to highlight the very high impact of Biomass Burning sources for all the PM2.5 pollution events recorded from early autumn to March. This study showed that industrial sources, even if they are the major sources during spring and summer, are not the major PM2.5 driver. However, this study highlights that industrial sources impact significantly the aerosol population (size, composition, etc.) in the studied area.

ORGANIC POLLUTION OF RIVERS : COMBINED THREATS OF... (2017)
OPEN ACCESS

Main

Title	Organic pollution of rivers : Combined threats of urbanization, livestock change
Published in	Scientific Reports, Vol. 7. ISSN 2045-2322.
Author	Wen, Y., Schoups, G.H.W., van de Giesen, N.C.
Date	2017-02-23
Reference(s)	Water Resources (C CITG WM WRS), General
Language	English
Type	Article
Abstract	Organic pollution of rivers by wastewater discharge from human activities negatively impacts people and ecosystems. Without treatment, pollution control relies on a combination of natural degradation and dilution by natural runoff to reduce downstream effects. We quantify here for the first time the global sanitation crisis through its impact on organic river pollution from the threats of (1) increasing wastewater discharge due to urbanization and intensification of livestock farming, and (2) reductions in river dilution capacity due to climate change and water extractions. Using in-stream Biochemical Oxygen Demand (BOD) as an overall indicator of organic river pollution, we calculate historical (2000) and future (2050) BOD concentrations in global river networks. Despite significant self-cleaning capacities of rivers, the number of people affected by organic pollution (BOD >5 mg/l) is projected to increase from 1.1 billion in 2000 to 2.5 billion in 2050. With developing countries disproportionately affected, our results point to a growing need for affordable wastewater solutions.

Note and Description

Now-a-days many developing countries are suffering from high motorization trend that has produced several unwanted by products. Though private vehicles provide high level of access and freedom but have enormous associated risks in the form traffic congestion and accidents, noise and air pollution and high energy consumption. Admitting these facts, many developing countries have initiated efficient mass transit systems to relieve these side effects. These systems provide a comfortable, safer and efficient services and so can be fairly preferred over private vehicles. Also the target of these systems is same as to cut down the private vehicle usage by attracting commuters from diverse social income classes other than low ones. However most of these systems are planned and designed independently, leading to the difficulties in accessing and egressing. Accessibility of these systems, which is one of the basic components of performance measure used for transit (Wardman 2004), is still crucial in most of the developing countries. Lack of any regular feeder services creates gap between ones'

Though private vehicles provide high level of access and freedom but have enormous associated risks in the form traffic congestion and accidents, noise and air pollution and high energy consumption. Admitting these facts, many developing countries have initiated efficient mass transit systems to relieve these side effects. These systems provide a comfortable, safer and efficient services and so can be fairly preferred over private vehicles. Also the target of these systems is same as to cut down the private vehicle usage by attracting commuters from diverse social income classes other than low ones. However most of these systems are planned and designed independently, leading to the difficulties in accessing and egressing. Accessibility of these systems, which is one of the basic components of performance measure used for transit (Wardman 2004), is still crucial in most of the developing countries. Lack of any regular feeder services creates gap between ones' origin and mass transits station that cause dissatisfaction to commuters and they lose patronage towards these systems. Currently paratransit is emerging as dominating feeder mode in several developing countries and connecting commuters from residence to public transport systems. However these paratransit have certain service areas and potential passengers. Also most of these are informal, not well organized and unsatisfactory and their movement is restricted to certain parts of the cities. Therefore a detailed evaluation is essential, also from commuters' viewpoint, before implementing them as feeder. Unlike paratransit, a regular feeder bus, a form of public transport, can provide safer, comfortable and reliable service and will be free from the enormous risks as associated with paratransit. However a regular feeder bus requires a

Fraunhofer-Publica

Charakteristika

- <http://publica.fraunhofer.de/starweb/pub09/index.htm>
- <http://publica.fraunhofer.de/starweb/pub09/en/index.htm> (v angličtině)
- Zachycuje publikační činnost a patenty Fraunhoferovy společnosti v Německu. Jedná se o největší evropskou organizaci zabývající se aplikovaným výzkumem. 24 500 zaměstnanců pracuje v 69 ústavech.

Publication Database of the Fraunhofer-Gesellschaft

The database "Fraunhofer-Publica" documents the research-related publications and patents of the Fraunhofer institutes.

Contained in this database are bibliographic data of articles, conference papers and proceedings, research reports, studies, theses, patents, etc. that are written by researchers of the Fraunhofer-Gesellschaft.

Fraunhofer-Publica

Pokročilé vyhledávání

The screenshot shows the Fraunhofer-Publica website interface. At the top, there is a browser window with the address bar showing `publica.fraunhofer.de/starweb/pub09/servlet.starweb`. Below the browser window, the website header includes the Fraunhofer logo and a navigation menu with items like "Main", "Search Form", "Search", and "Search Help". The "Search" item is highlighted with a red box, and a red arrow points from it to the search form on the right. The search form has a green header with the word "Search" and the text "Fraunhofer-Publica" on the right. It contains input fields for "Keyword" (with the text "nano* toxi*"), "Person", and "Year" (with a "through" field and "(yyyy)" placeholder). Below these fields are buttons for "Search", "Clear all", and "Help". At the bottom of the page, there is a footer with the text "©2014 Fraunhofer-Gesellschaft" and links for "Contact", "Imprint", and "Data Protection".

Bibliografický záznam

The screenshot shows the Fraunhofer-Publica website interface. The browser address bar displays `publica.fraunhofer.de/starweb/pub09/servlet.starweb`. The top navigation bar includes links for 'Suchhilfe', 'Neue Publikationen', 'Dokumentenlieferung', 'Datenexport', 'Leitlinien', 'Technische Dokumentation', and 'Kontakt'. The main content area is titled 'Vollanzeige' and features a blue button 'Angezeigte Dokumente ausgeben'. The bibliographic record is for the paper 'Long-term effects of sulfidized silver nanoparticles in sewage sludge on soil microflora' by Kraas, Marco et al. The authors are listed as Kraas, Marco (Fraunhofer Institute for Molecular Biology and Applied Ecology - IME - Schmallenberg - Germany); Schlich, Karsten (Fraunhofer Institute for Molecular Biology and Applied Ecology - IME - Schmallenberg - Germany); Knopf, Burkhard (Fraunhofer Institute for Molecular Biology and Applied Ecology - IME - Schmallenberg - Germany); Wege, Franziska (Fraunhofer Institute for Molecular Biology and Applied Ecology - IME - Schmallenberg - Germany); Kägi, Ralf (EAWAG Swiss Federal Institute of Aquatic Science and Technology - Dübendorf - Switzerland); Tertytze, Konstantin (Institute of Geological Sciences, Freie Universität Berlin - Berlin - Germany); and Hund-Rinke, Kerstin (Fraunhofer Institute for Molecular Biology and Applied Ecology - IME - Schmallenberg - Germany). The 'Zugang:' section is highlighted with a red box, showing 'Volltext' (Full Text) and 'DOI: 10.1007/s11325-017-3904-2'. The 'Quelle' (Source) is 'Environmental toxicology (2017), Online First, 9 S. ISSN: 1520-4081'. The 'Sprache' (Language) is 'Englisch'. The 'Dokumentart' (Document Type) is 'Zeitschriftenaufsatz, Elektronische Publikation'. The 'Fraunhofer Institut' is 'Fraunhofer IME (Institutshomepage)'. The 'Schlagwörter' (Keywords) are 'nanoeotoxicology; soil ecotoxicology; nanoparticle; sulfidized Ag nanoparticle; sewage sludge; transmission electron microscopy'. The 'Abstract' section describes the study on the long-term effects of sulfidized silver nanoparticles (AgNPs) on soil microorganisms in a laboratory WWTP.

Abstract
The use of silver nanoparticles (AgNPs) in consumer products such as textiles leads to their discharge into wastewater and consequently to a transfer of the AgNPs to soil ecosystems via biosolids used as fertilizer. In urban wastewater systems (e.g., sewer, wastewater treatment plant [WWTP], anaerobic digesters) AgNPs are efficiently converted into sparingly soluble silver sulfides (Ag₂S), mitigating the toxicity of the AgNPs. However, long-term studies on the bioavailability and effects of sulfidized AgNPs on soil microorganisms are lacking. Thus we investigated the bioavailability and long-term effects of AgNPs (spiked in a laboratory WWTP) on soil microorganisms. Before mixing the biosolids into soil, the sludge was either anaerobically digested or directly dewatered.

LAOPAP

Latin American Open Archives Portal

- <http://lanic.utexas.edu/project/laoap/>
- Portál zaměřený na šedou literaturu open access ze společenských věd ze zemí Latinské Ameriky.
- Byl vytvořen za finanční podpory USA. Na jeho vzniku se podílely univerzity v USA.

LAOAP: Providing Access to Latin American Grey Literature

Search the Archives:

leadership Search

About

The **Latin American Open Archives Portal** is a project of the [Latin Americanist Research Resources Project - LARRP](#), in collaboration with the [Latin American Network Information Center - LANIC](#), to improve access to social sciences grey literature produced in Latin America. The portal provides access to working documents, pre-prints, research papers, statistical documents, and other difficult-to-access materials from the "deep Web." Typically, this content is published by research institutes, non-governmental organizations, and peripheral agencies that are not controlled by commercial publishers.

Utilizing the Open Archives Initiative Protocol for Metadata Harvesting (OAI-PMH) as a low-barrier solution to disseminate and share digital resources, the portal provides access to digital content from participating data providers and specialized searching services for the Latin Americanist social sciences research community.
