# U.S. National Library of Medicine

<http://www.nlm.nih.gov/>

The screenshot shows the homepage of the U.S. National Library of Medicine. The browser address bar displays <http://www.nlm.nih.gov/>. The page features a navigation menu on the left with categories: Databases, Explore NLM, Research at NLM, and NLM for You. The 'Databases' section lists various resources, with 'MeSH' circled in black. The 'Explore NLM' section lists various services, with 'Library Catalog & Services' circled in black. The main content area includes a search bar, a 'Contact NLM' section, and a featured exhibition titled 'NATIVE VOICES: A Multimedia Exhibition for Visitors of All Ages'. The exhibition is described as exploring the interconnectedness of wellness, illness, and cultural life of Native peoples. To the right, the 'Find, Read, Learn' section provides a list of services such as searching biomedical literature, finding medical terminologies, and reading about diseases. The bottom of the page contains a footer with copyright information, contact details, and a USA.gov logo.

# U.S. National Library of Medicine – katalog

<http://www.ncbi.nlm.nih.gov/nlmcatalog>

The screenshot shows a web browser window displaying the NLM Catalog homepage. The address bar shows the URL <http://www.ncbi.nlm.nih.gov/nlmcatalog>. The page features a search bar with the text "emergenc\*" and a "Search" button. Below the search bar, there is a navigation menu with "NCBI Resources" and "How To" options. The main content area includes a banner image of the National Library of Medicine building, followed by the title "NLM Catalog" and a descriptive paragraph: "The NLM Catalog provides access to NLM bibliographic data for journals, books, audiovisuals, computer software, electronic resources and other materials. Links to the library's holdings in LocatorPlus, NLM's online public access catalog, are also provided." Below this, there are three columns of links: "Using NLM Catalog" (including "How to Search for Journals", "Tutorials", "NLM Catalog FAQs", and "New and Noteworthy"), "NLM Catalog Tools" (including "Journals in NCBI Databases", "Broad Subject Terms", "Authority Index", and "Journal Lists by FTP"), and "More Resources" (including "MeSH Database", "Images in the History of Medicine", "Locator Plus", and "E-Utilities"). At the bottom, there is a breadcrumb trail "You are here: NCBI > Literature > National Library of Medicine (NLM) Catalog" and a "Write to the Help Desk" link. The footer contains copyright information and logos for the National Library of Medicine, National Center for Biotechnology Information, and USA.gov.

## Základní vyhledávání – základní rešeršní pole

The screenshot shows the Medvik website interface in a Windows Internet Explorer browser. The address bar displays the URL <http://www.medvik.cz/bmc/>. The search bar at the top of the page contains the query `(hrudník* or žebř*) and (poranění* or zranění* or rán*)`, which is circled in black. A green "Hledat" button is positioned to the right of the search bar. Below the search bar, there are navigation tabs for "Úvod", "Pokročilé hledání", "Autoři", "Témata", and "Prohlížení". On the left side, there are sections for "Online zdroje NLK" and "Základní informace". In the center, there is a section titled "Najít konkrétní..." with input fields for "Název", "Časopis", "Předmět", "Autor", and "Akce", each with a search icon. On the right side, there is a "Vyhledávací plugin" section. The footer of the page includes the version "Verze: 1.0", a link to "Přehled změn", a link to "Napište nám", and the text "Provozuje: Národní lékařská knihovna". The Windows taskbar at the bottom shows the Start button and several open applications: Medvik - Wi..., Dokument2..., Skol20140..., and Microsoft P... The system tray shows the date and time as 9:00 čtvrtek.

## Výběr termínů z nabídky

The screenshot shows the Medvik website interface. At the top, there is a search bar with the text "napište hledaný výraz..." and a green "Hledat" button. Below the search bar, there are navigation tabs: "Úvod", "Pokročilé hledání", "Autoři", "Témata", "Prohlížení", "Výsledky", and "Schránka". The "Pokročilé hledání" tab is selected, and an arrow points to it from a text box on the left. The main content area shows search results for "poranění hrudníku". The first result is "poranění hrudníku" with a MeSH descriptor, and the second is "poranění hrudníku" with a MeSH concept. Both results have a "prohlédnout | použít" link. A black circle highlights the "použít" link in the first result. The browser's address bar shows "http://www.medvik.cz/bmc/subject.do?pageup=1". The browser's taskbar at the bottom shows various icons and the system clock indicating 2:09 on 6.3.2014.

S výrazy vybranými z rejstříků lze dále pracovat v pokročilém vyhledávání.

## Výběr výsledků do schránky (1)

The screenshot shows the Medvik search results page. The browser address bar displays <http://www.medvik.cz/bmc/refine.do>. The search results are for the query "Hledat: 'hrudník' or 'žebra' and ('ošetř' or 'péče')". The results list shows 268 results. The 'Schránka' tab is highlighted with a red circle. A red arrow points to the 'přidat do schránky' button in the search results list.

## Výběr výsledků do schránky (2)

The screenshot shows the Medvik website interface. At the top, there is a search bar and navigation tabs for 'Úvod', 'Pokročilé hledání', 'Autoři', 'Témata', and 'Prohlížení'. The main content area displays search results for a query about congenital chylothorax. On the left, there are filters for 'Vydáno' (Year), 'Jazyk' (Language), 'Země' (Country), and 'Check Tag'. On the right, there are filters for 'Databáze', 'Vlastník', and 'Typ dokumentu'. The search results list two items, with the first one selected. A black circle highlights the 'Schránka' button in the top right corner, and another circle highlights the 'kopie' button for the first search result.

## Práce se schránkou

The screenshot shows the Medvik website interface. At the top, there is a search bar with the text "napište hledaný výraz..." and a "Hledat" button. Below the search bar, there are navigation tabs: "Úvod", "Pokročilé hledání", "Autoři", "Témata", "Prohlížení", "Výsledky", and "Schránka". The "Schránka" tab is active. The main content area is titled "Obsah schránky" and displays a list of search results. The first result is "1 Diagnostika a terapie kongenitálního chylothoraxu – 20 let zkušenosti" by Malkovská, Alena, Žižka, Zdeněk, Pašková, Andrea, Sebroň, Václav, 1959-; Calda, Pavel, 1957-. The second result is "2 Změny chirurgické techniky při řešení Pectus excavatum v letech 1991–2012" by Šnajdauf, Jiří, Vyhnaněk, Martin, Rygl, Michal, 1965-; Kučera, Alexandr, Fryč, Richard, 1956-; Petru, Ondřej, Mixa, Vladimír, Kynčl, Martin. The "Export" button is circled in black. A dropdown menu is open over the "Export" button, showing options: "Bibliomedica", "ISO690", "Vlastní nastavení...", and "Citační formát (RIS)".

# Slovenská lekárska knižnica

<http://arl4.library.sk/arl-sllk/sk/rozsirene-vyhľadavanie/>

- Bibliografická databáze.
- Pokrývá slovenské a výbĕrově i některé české časopisy od r. 1996 do současnosti (s určitými výpadky).
- Lze používat:
  - uvozovky pro frázi,
  - \* pro pravostranné rozšíření.

# Slovenská lekárska knižnica

## Vyhľadávací maska

The screenshot shows the search interface of the Slovak Medical Library website. The browser window title is "Vyhľadanie | Slovenská lekárska knižnica - Windows Internet Explorer". The address bar shows the URL "http://arl4.library.sk/arl-silk/sk/rozsiрене-vyhľadavanie/". The search bar contains the text "inzul\* and pump\*" and the search button is labeled "Nájsť". The search results show one result: "Slovenská lekárska knižnica - SILK - Katalóg (213862)".

The interface includes a navigation menu with options: Vyhľadanie, Konto, Nastavenie, Predregistrácia, Napíšte nám, and Pomoc. There is also a "Prihlásenie" button. The user is identified as "Neprihlásený používateľ" with a shopping cart icon and "V košíku (0)".

The search results section is titled "Súvisiace stránky" and includes links to "Knižnica informuje", "Vyhľadanie", "História vyhľadávania", "Zdroje", and "Slovník". There is also a "Novinky" section with a link to "Gesundheitsbezogene Lebensqualität bei Kindern und Jugendlichen mit Hochfunktionaler Autismus-Spectrum-Störung".

The search filters section is titled "Limity" and "Nastavenie". It includes the following filters:

- Rok vydania:** Od 2010, Do 2014
- Krajina vydania:** Slovenská republika, Česká republika, Československo
- Druh dokumentu:** Knihy, Články - BMS, Elektronické dokumenty, AV dokumenty, Časopisy
- Jazyk dokumentu:** Slovenčina, Čeština, Angličtina, Nemčina, Ruština
- Dostupnosť:** Volné dokumenty, Prezenčné dokumenty, Len dokumenty z fondu knižnice

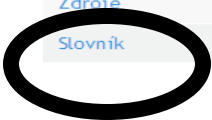

The bottom of the screenshot shows the Windows taskbar with the Start button and several open applications: "Vyhľadávan...", "MeSH Brow...", "Skol20140...", and "Microsoft P...". The system clock shows 12:31 on a Friday.

# Slovenská lekárska knižnica

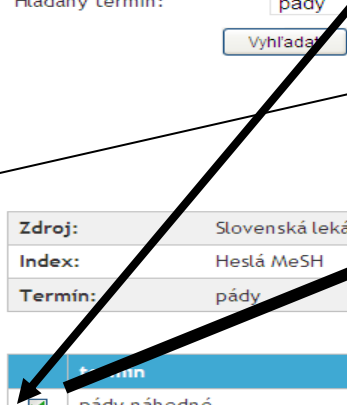

## Využití slovníku - rejstříků

The screenshot shows the website interface with a search form and results. The search form includes fields for 'Zdroj' (Slovenská lekárska kni...), 'Vyber index' (Heslá MeSH), and 'Hľadaný termín' (pády). The 'Expertné vyhľadavanie (CQL)' section shows a query: 'S606 = "pády náhodné"'. The 'Odoslať' button is circled in black. The search results table is as follows:

	Termín	výskytov
<input checked="" type="checkbox"/>	pády náhodné	72
<input type="checkbox"/>	pády náhodné - dojča	1
<input type="checkbox"/>	pády náhodné - ľudia pokročilého veku	7
<input type="checkbox"/>	pády náhodné - ľudia vyššieho veku	30
<input type="checkbox"/>	pády náhodné - prevencia a kontrola	42

Odesláním se výraz vybraný ve slovníku přenesse přímo do rešeršní masky, ve které lze dotaz dále upřesnit.  
**Vyhľadať:** vyhľadajú sa záznamy s vybraným výrazom.

3 Staged cardiovascular magnetic resonance for differential diagnosis of Troponin T positive patients with low likelihood for acute coronary syndrome

Steen, Henning; Madadi-Schroeder, Media; Lehrke, Stephanie; Lossnitzer, Dirk; Giannitsis, Evangelos; et al. *Journal of Cardiovascular Magnetic Resonance* 12 (2010): 51.

Citation/Abstract Full text - PDF (2 MB)

Abstract (summary)

4 Abstract

Background: Cardiac Troponin -T (cTnT) is a cardio-specific indicator of myocardial necrosis due to ischemic or non-ischemic events. Considering the multiple causes of myocardial injury and treatment consequences there is great clinical need to clarify the underlying reason for cTnT release. We sought to implement acute CMR as a non-invasive imaging method for differential diagnosis of elevated cTnT in chest-pain unit (CPU) patients with non-conclusive symptoms and ECG-changes and a low to intermediate probability for coronary artery disease (CAD).

5 Results: CPU patients (n = 29) who had positive cTnT were scanned at 1.5T with a new step-by-step CMR algorithm including cine-, perfusion-, T2-, angiography- and late gadolinium enhancement (LGE) imaging. For comparison patients also underwent echocardiography and coronary angiography if necessary. CMR was conducted successfully in all patients and detected 93% of cTnT releases of unknown cause, without adverse hemodynamic or arrhythmic events. Acute myocardial infarction was detected in 11, pulmonary embolism in 6, myocarditis in 5, renal disease and cardiomyopathy in 2, storage disorder in 1 patient. In 2 patients CMR was unable to reveal the cause of cTnT elevations. Mean CMR scan-time was 35 ± 8 min. In 4 patients, CMR led to immediate coronary angiography with correct ...

## Citation/Abstract – začátek záznamu

Algorithm for probable acute coronary syndrome using high-sensitivity troponin T assay vs fourth-generation troponin T assay

Conde, Diego; Costabel, Juan Pablo; Lambardi, Florencia. **The American Journal of Emergency Medicine** 31.8 (2013): 1226-9.

**Abstract (summary)** Translate

Background

Chest pain represents between 5% and 10% of annual visits to emergency departments (EDs) and near 25% of hospitalizations. Characterization of chest pain is sometimes difficult, and strategies should focus on preventing inappropriate discharge of patients with **acute coronary syndrome**. The goal of our study is to compare negative predictive value of the algorithm in the chest pain unit using the fourth-generation **troponin T** assay (4GTT) vs high-sensitivity **troponin T** assay (HSTT).

Methods

We included 600 patients with probable **acute coronary syndrome**, who were discharged from the chest pain unit without an **acute coronary syndrome**: 300 patients in the 4GTT group and 300 patients in the HSTT group. Clinical and laboratory variables were analyzed. All the patients were followed up at 30 days, and the cardiovascular events were recorded.

Results

Major cardiac events occurred in only 3 (1.2%) in the HSTT group vs 5 (1.7%) in the 4GTT group (P, nonsignificant). The negative predictive value was 99% in both groups. Emergency department length of stay was 4.3 ± 2.6 hours in HSTT group vs 10 ± 3.4 hours in the 4GTT group (P = .01).

**Postoperative monitoring in pregnant patients undergoing surgery for advanced malignancy in last trimester: How long is enough?**

Gupta A, Verma A, Sood R.

Author information

**Abstract**

Surgery for advanced breast malignancy in the last trimester of pregnancy is uncommon. We present successful management of a 32-year-old woman, 30 weeks pregnant with stage 3 breast malignancy, for surgery followed by normal labor and chemotherapy. Surgery and intraoperative period were uneventful. Patient had uterine contractions 36 h postsurgery, which were managed timely with active interventions and tocolytics. Risk of premature labor following nonobstetric surgery in pregnant patients is estimated to be 8.3%, but majority of the studies have been carried out in second trimester following appendectomy. There is insufficient data in literature regarding the estimation and duration of persistence of risk of premature labor in these patients. No guidelines are available regarding how long they need to be monitored for premature labor. There is some evidence, although little that risk of premature labor persists for 7 days postsurgery. In the absence of convincing studies and guidelines, we recommend postoperative monitoring for at least 7 days in patients undergoing major surgeries for malignancies in last trimester. Multidisciplinary approach is required to manage these patients.

**KEYWORDS:** Postoperative monitoring; pregnancy; premature labor; stage 3 breast cancer

## Pokročilé vyhledávání – využití rejstříku

The screenshot displays the PubMed Advanced Search Builder interface. At the top, the browser address bar shows the URL [www.ncbi.nlm.nih.gov/pubmed](http://www.ncbi.nlm.nih.gov/pubmed). The page title is "PubMed Advanced Search Builder". A message indicates "History deleted." The search input field contains the query: "burns/diet therapy"[MeSH Major Topic]. Below the input field, a dropdown menu is open, showing a list of MeSH terms related to "burns/diet therapy":

- burns/chemistry (3)
- burns/classification (142)
- burns/complications (5571)
- burns/cytology (1643)
- burns/diagnosis (2490)
- burns/diet therapy (78)
- burns/drug therapy (2274)
- burns/economics (93)
- burns/enzymology (259)
- burns/epidemiology (1828)

The "burns/diet therapy (78)" term is currently selected. To the right of the dropdown, there are links for "Previous 200" and "Next 200". Below the dropdown, there are buttons for "Search" and "Add to history". The "History" section at the bottom indicates "There is no recent history".

At the bottom of the page, there is a navigation bar with the following sections:

- GETTING STARTED**: NCBI Education, NCBI Help Manual
- RESOURCES**: Chemicals & Bioassays, Data & Software
- POPULAR**: PubMed, Bookshelf
- FEATURED**: Genetic Testing Registry, PubMed Health
- NCBI INFORMATION**: About NCBI, Research at NCBI

The Windows taskbar at the very bottom shows the Start button and several open applications, including Internet Explorer, Microsoft PowerPoint, and the current browser window.

Výběr termínu

- [Influenza, Human](#)
  1. An acute viral infection in humans involving the respiratory tract. It is marked by inflammation of the NASAL MUCOSA; the PHARYNX; and conjunctiva, and by headache and severe, often generalized, myalgia.  
Year introduced: 2006 (1963)
- [Influenza A Virus, H7N9 Subtype](#)
  2. A subtype of **INFLUENZA A VIRUS** with the surface proteins hemagglutinin 7 and neuraminidase 9. This avian origin virus was first identified in humans in 2013.  
Year introduced: 2014
- [Influenza Pandemic, 1918-1919](#)
  3. The **influenza** outbreaks of 1918 to 1919 also known as Spanish flu pandemic. First reported in Haskell County in Kansas in March of 1918 the disease spread throughout the world and may have killed as many as 25 million people.  
Year introduced: 2014
- [Influenza A Virus, H10N7 Subtype](#)
  4. A subtype of **INFLUENZA A VIRUS** comprised of the surface proteins hemagglutinin 10 and neuraminidase 7. It has been isolated from a variety of wild and domestic animals including ducks, emu, and mink. It was found for the first time in humans in 2004.  
Year introduced: 2011
- [Influenza A Virus, H7N3 Subtype](#)
  5. A subtype of **INFLUENZA A VIRUS** comprised of the surface proteins hemagglutinin 7 and neuraminidase 3. It was first detected in turkeys in Britain in 1963 and there have been several outbreaks on poultry farms since that time. A couple cases of human infections have been reported.  
Year introduced: 2011
- [Influenza A Virus, H7N2 Subtype](#)
  6. A subtype of **INFLUENZA A VIRUS** comprised of the surface proteins hemagglutinin 7 and neuraminidase 2. It has been involved in a number of outbreaks in the 21st century on poultry farms and has been isolated a few times in humans.  
Year introduced: 2011
- [Influenza A Virus, H7N1 Subtype](#)
  7. A subtype of **INFLUENZA A VIRUS** comprised of the surface proteins hemagglutinin 7 and neuraminidase 1. This subtype has demonstrated the ability to mutate from a low pathogenic form to a highly pathogenic form in birds. It was responsible for a 1999 outbreak in turkeys in Italy.  
Year introduced: 2011
- [Influenza A Virus, H1N2 Subtype](#)
  8. A subtype of **INFLUENZA A VIRUS** comprised of the surface proteins hemagglutinin 1 and neuraminidase 2. It is endemic in both human and pig populations.

## Výsledky hledání

The screenshot shows the PubMed Health search results page. The browser address bar displays the URL: [http://www.ncbi.nlm.nih.gov/pubmedhealth/?term=honey+\(wound\\*+or+injur\\*\)&filters=](http://www.ncbi.nlm.nih.gov/pubmedhealth/?term=honey+(wound*+or+injur*)&filters=). The search bar contains the query "honey (wound\* or injur\*)" and the search button is labeled "Search".

The page header includes the U.S. National Library of Medicine logo and the text "U.S. National Library of Medicine - The World's Largest Medical Library". Navigation links include "About", "Home", "See us on Facebook", "Follow us", "Add us", and "Help".

The main content area is titled "Home > Search Results" and displays the following information:

- Article types:** Consumer information, Systematic reviews, Clinical information.
- Added to PubMed Health:** In last 30 days, Custom range...
- Additional filters:** Systematic reviews with quality assessment, Reviews from DARE.
- Content providers:** AHRQ (US Agency for Healthcare Research and Quality), Cochrane Collaboration, NCI (US National Cancer Institute), More ...

The search results are displayed in a list format, with the first result highlighted:

**Results: 1 to 20 of 26** << First < Prev Page 1 Next > Last >>

[A systematic review of honey uses and its potential value within oncology care](#)  
This review assessed the therapeutic efficacy of **honey**. The authors concluded that **honey** was a suitable alternative for **wound** healing, burns and skin conditions, and potentially in Database of Abstracts of Reviews of Effects (DARE): Quality-assessed Reviews [Internet] - Centre for Reviews and Dissemination (UK).  
Version: 2008

[Honey in the treatment of burns: a systematic review and meta-analysis of its efficacy](#)  
The authors concluded that available evidence indicated a greater efficacy of **honey** compared with alternative dressing treatments for superficial or partial thickness burns. The Database of Abstracts of Reviews of Effects (DARE): Quality-assessed Reviews [Internet] - Centre for Reviews and Dissemination (UK).  
Version: 2009

[Surgical Site Infection: Prevention and Treatment of Surgical Site Infection](#)  
Infections that occur in the **wound** created by an invasive surgical procedure are generally referred to as surgical site infections (SSIs). SSIs are one of the most important causes of NICE Clinical Guidelines - National Collaborating Centre for Women's and Children's Health (UK).  
Version: October 2008  
[Show search results within this document](#)

[Honey as a topical treatment for acute and chronic wounds](#)  
**Honey** has been used on **wounds** since ancient times. Clinical trials have tested the effect of **honey** in both acute **wounds** (e.g. burns, lacerations) and chronic **wounds** (e.g. skin Cochrane Database of Systematic Reviews: Plain Language Summaries [Internet] - John Wiley & Sons, Ltd. Version: 2014

[Systematic review and meta-analysis on the use of honey to protect from the effects of radiation-induced oral mucositis](#)  
Recently, 4 separate human controlled trials reported that **honey** appeared to protect from the effects of radiation-induced oral mucositis formation, a complication of radiation therapy Database of Abstracts of Reviews of Effects (DARE): Quality-assessed Reviews [Internet] - Centre for Reviews and Dissemination (UK).  
Version: 2012

[Fact sheet: Chronic wounds](#)  
It is easy to get hurt in your day-to-day life, but most small **wounds** will heal on their own. Yet for larger **wounds** from surgery or bigger cuts, you might need more than just a small Informed Health Online [Internet] - Institute for Quality and Efficiency in Health Care (IQWiG).  
Version: April 17, 2013

On the right side of the page, there are several utility boxes:

- Save search** and **Save search as RSS**
- Medical Encyclopedia** with links to "Insect bites and stings", "Botulism", and "Impetigo".
- Systematic Reviews in PubMed** with links to "Topical agents and dressings for fungating wounds", "Dressings and Products in Pediatric Wound Care", "CAM use in dermatology. Is there a potential role for honey, green tea, and vitamin C?", "Antibiotics and antiseptics for venous leg ulcers", and "Antibiotics and antiseptics for venous leg ulcers".
- Recent Activity** showing the current search "honey (wound\* or injur\*) (26)" and a previous search "(burns[MeSH Major Topic]) AND toxic shock (275)".

The bottom of the page shows the Windows taskbar with various application icons and the system clock displaying "10:22 2.6.2014".

All Databases Search

### All Resources

All Databases Downloads Submissions Tools How To

#### Databases

**[BioProject \(formerly Genome Project\)](#)**  
A collection of genomics, functional genomics, and genetics studies and links to their resulting datasets. This resource describes project scope, material, and objectives and provides a mechanism to retrieve datasets that are often difficult to find due to inconsistent annotation, multiple independent submissions, and the varied nature of diverse data types which are often stored in different databases.

**[BioSample](#)**  
The BioSample database contains descriptions of biological source materials used in experimental assays.

**[BioSystems](#)**  
Database that groups biomedical literature, small molecules, and sequence data in terms of biological relationships.

**[Bookshelf](#)**  
A collection of biomedical books that can be searched directly or from linked data in other NCBI databases. The collection includes biomedical textbooks, other scientific titles, genetic resources such as *GeneReviews*, and NCBI help manuals.

**[ClinVar](#)**  
A resource to provide a public, tracked record of reported relationships between human variation and observed health status with supporting evidence. Related information in the [NIH Genetic Testing Registry \(GTR\)](#), [MedGen](#), [Gene](#), [OMIM](#), [PubMed](#) and other sources is accessible through hyperlinks on the records.

**[CloneDB \(formerly Clone Registry\)](#)**  
A database that integrates information about clones and libraries, including sequence data, map positions and distributor information.

**[Computational Resources from NCBI's Structure Group](#)**  
A centralized page providing access and links to resources developed by the Structure Group of the NCBI Computational Biology Branch (CBB). These resources cover databases and tools to help in the study of macromolecular structures, conserved domains and protein classification, small molecules and their biological activity, and biological pathways and systems.

**[Consensus CDS \(CCDS\)](#)**  
A collaborative effort to identify a core set of human and mouse protein coding regions that are consistently annotated and of high quality.

**[Conserved Domain Database \(CDD\)](#)**  
A collection of sequence alignments and profiles representing protein domains conserved in molecular evolution. It also includes alignments of the domains to known 3-dimensional protein structures in the MMDB database.

**[Database of Expressed Sequence Tags \(dbEST\)](#)**  
A division of GenBank that contains short single-pass reads of cDNA (transcript) sequences. dbEST can be searched directly through the Nucleotide EST Database.

**[Database of Genome Survey Sequences \(dbGSS\)](#)**  
A division of GenBank that contains short single-pass reads of genomic DNA. dbGSS can be searched directly through the Nucleotide EST Database.

**An infectious disease/fever screening radar system which stratifies higher-risk patients within ten seconds using a neural network and the fuzzy grouping method. (03/01/2015)**  
Sun Guanghao; Matsui Takemi; Hakoziaki Yukiya; Abe Shigeto  
PMID: 25541528

**Objectives** To classify higher-risk influenza patients within 10 s, we developed an infectious disease and fever screening radar system.

**Methods** The system screens infected patients based on vital signs, i.e., respiration rate measured by a radar, heart rate by a finger-tip photo-reflector, and facial temperature by a thermography. The system segregates subjects into higher-risk influenza (HR-I) group, lower-risk influenza (LR-I) group, and non-influenza (Non-I) group using a neural network and fuzzy clustering method (FCM). We conducted influenza screening for 35 seasonal influenza patients and 48 normal control subjects at the Japan Self-Defense Force Central Hospital. Pulse oximetry oxygen saturation (SpO2) was measured as a reference.

**Results** The system classified 17 subjects into HR-I group, 26 into LR-I group, and 40 into Non-I group. Ten out of the 17 HR-I subjects indicated SpO2 <96%, whereas only two out of the 26 LR-I subjects showed SpO2 <96%. The chi-squared test revealed a significant difference in the ratio of subjects showed SpO2 <96% between HR-I and LR-I group (p < 0.001). There were zero and nine normal control subjects in HR-I and LR-I groups, respectively, and there was one influenza patient in Non-I group.

**Conclusions** The combination of neural network and FCM achieved efficient detection of higher-risk influenza patients who indicated SpO2 96% within 10 s.

### Child, household, and caregiver characteristics associated with hospitalization for influenza among children 6-59 months of age: an emerging infections program study.

Author(s): [Dharan Nila J.](#); [Sokolow Leslie Z.](#); [Cheng Po-Yung.](#); [Gargiullo Paul.](#); [Gershman Ken.](#); [Lynfield Ruth.](#); [Morin Craig.](#); [Thomas Ann.](#); [Meek James.](#); [Farley Monica M.](#); [Arnold Kathryn E.](#); [Reingold Arthur.](#); [Craig Allen S.](#); [Schaffner William.](#); [Bennett Nancy M.](#); [Zansky Shelley.](#); [Baumbach Joan.](#); [Lathrop Sarah.](#); [Kamimoto Laurie.](#); [Shay David K.](#)

+ Author Information (1)

Pub Date: 06/2014 Source/Vol: The Pediatric infectious disease journal / 33(6):e141-50.

★ ✉ 🖨

**Background** Young children are at increased **risk** of severe outcomes from **influenza** illness, including hospitalization. We conducted a case-control study to identify **risk** factors for **influenza**-associated hospitalizations among children in US Emerging Infections Program sites.

**Methods** Cases were children 6-59 months of age hospitalized for laboratory-confirmed **influenza** infections during 2005-2008. Age- and zip-code-matched controls were enrolled. Data on child, caregiver and household characteristics were collected from parents and medical records. Conditional logistic regression was used to identify independent **risk** factors for hospitalization.

**Results** We enrolled 290 (64%) of 454 eligible cases and 1089 (49%) of 2204 eligible controls. **Risk** for **influenza** hospitalization increased with maternal age <26 years [odds ratio (OR): 1.8, 95% confidence interval (CI): 1.1-2.9]; household income below the poverty threshold (OR: 2.2, 95% CI: 1.4-3.6); smoking by >50% of household members (OR: 2.9, 95% CI: 1.4-6.6); lack of household **influenza** vaccination (OR: 1.8, 95% CI: 1.2-2.5) and presence of chronic illnesses, including hematologic/oncologic (OR: 11.8, 95% CI: 4.5-31.0), pulmonary (OR: 2.9, 95% CI: 1.9-4.4) and neurologic (OR: 3.8, 95% CI: 1.6-9.2) conditions. Full **influenza** immunization decreased the **risk** among children 6-23 months of age (OR: 0.5, 95% CI: 0.3-0.9) but not among those 24-59 months of age (OR: 1.5, 95% CI: 0.8-3.0; P value for difference = 0.01).

**Conclusions** Chronic illnesses, young maternal age, poverty, household smoking and lack of household **influenza** vaccination increased the **risk** of **influenza** hospitalization. These characteristics may help providers to identify young children who are at greatest **risk** for severe outcomes from **influenza** illness.

## Základní vyhledávání

The screenshot shows the MEDPILOT website interface. At the top, there is a navigation bar with links for "Login", "About MEDPILOT", and "Deutsch". The main header features the MEDPILOT logo, which includes a red CD icon, and the tagline "The Searchportal for Medical Information". Below the header is a large teal search bar containing the search query: "electrical stimulation" OR "electric stimulation". To the right of the search bar are buttons for "Search" and "Advanced search". Underneath the search bar, there are links for "Document order", "My account", and "User data". The footer section includes logos for "Service provided by ZB MED and DIMDI" and "Sponsored by DFG and Bundesministerium für Gesundheit". At the very bottom, there is a horizontal menu with various medical topics: ADHS, Akutschmerz, Anatomie, Aphasie, Arterielle Hypertonie, Ausdauertraining, Basale Stimulation, Brustkrebs, Burnout, Cancer, Demenz, Depression, Diabetes, Diabetes Mellitus, and Downsyndrom. The Windows taskbar at the bottom shows the time as 16:06 on 26.2.2015.

2. Result	
<b>Title</b>	Electrical stimulation with non-implanted electrodes for urinary incontinence in men.
<b>Author</b>	Berghmans, Bary ; Hendriks, Erik ; Bernards, Arnold ; de Bie, Rob ; Omar, Muhammad Imran
<b>Source</b>	The Cochrane database of systematic reviews
<b>Abstract</b>	<p>Background: Electrical stimulation with non-implanted devices is used for patients with different types of urinary incontinence and symptoms of urgency, frequency and nocturia. The current review focused on electrical stimulation with non-implanted devices for the treatment of urinary incontinence in men.</p> <p>Objectives: To determine the effectiveness of electrical stimulation with non-implanted devices for men with stress, urgency or mixed urinary incontinence in comparison with no treatment, placebo treatment, or any other 'single' treatment. Additionally, the effectiveness of electrical stimulation with non-implanted devices in combination with another intervention was compared with the other intervention alone. Finally, the effectiveness of one method of electrical stimulation with non-implanted devices was compared with another method.</p> <p>Search methods: We searched the Cochrane Incontinence Group Specialised Trials Register, which contains trials identified from the Cochrane Central Register of Controlled Trials (CENTRAL), MEDLINE, PreMEDLINE, and handsearching of journals and conference proceedings (searched 21 January 2012). We also searched other electronic and non-electronic bibliographic databases and the reference lists of the included studies as well as contacting researchers in the field to identify other relevant trials.</p> <p>Selection criteria: Randomized and quasi-randomized controlled trials.</p> <p>Data collection and analysis: Two review authors independently assessed all the identified trials for eligibility. Risk of bias was assessed using the Cochrane tool for determining bias. Disagreements were resolved by discussion, and a third review author was involved in the case of no consensus. Data were analysed using Cochrane methods.</p> <p>Main results: Six randomized controlled trials (five full papers and one abstract) were included. There was considerable variation in the interventions used, study protocols, types of electrical stimulation parameters and devices, study populations and outcome measures. In total 544 men were included, of whom 305 received some form of electrical stimulation, and 239 a control or comparator treatment. The trials were mostly small and generally there was not sufficient information to assess risk of bias; only two trials used secure methods of randomization. There was some evidence that electrical stimulation (ES) had a short-term effect in reducing incontinence compared with sham treatment (for example risk ratio (RR) at six months 0.38, 95% CI 0.16 to 0.87) but not at 12 months. Four trials evaluated the effect of adding PFMT to ES versus pelvic floor muscle training (PFMT) alone or with biofeedback. There was no evidence of a statistically significant difference in the number of men with urinary incontinence at three months (146/239, 61% for combined treatment versus 98/156, 63% with PFMT alone; RR 0.93, 95% CI 0.82 to 1.06). However, there were more adverse effects with combined treatment (23/139, 17% versus 2/99, 2% with PFMT alone; RR 7.04, 95% CI 1.51 to 32.94) and quality of life also seemed better with PFMT alone. One small trial did not detect statistically significant differences between two methods of administration of transcutaneous electrical stimulation (anal versus perineal) but the quality of life score was lower (better) in the anal stimulation group.</p> <p>Authors' conclusions: There was some evidence that electrical stimulation enhanced the effect of PFMT in the short term but not after six months. There were, however, more adverse effects (pain or discomfort) with electrical stimulation.</p>

### Abstract

#### Background

Empiric triple treatments for *Helicobacter pylori* (*H. pylori*) are increasingly unsuccessful. We evaluated factors associated with failure of these treatments in the central region of Portugal.

# BioMed Central

## Pokročilé vyhledávání – pouze po registraci

The screenshot displays the BioMed Central website's search interface. At the top, there is a navigation bar with the BioMed Central logo and the tagline "The Open Access Publisher". Below this, a search bar is visible with the text "Search BioMed Central" and a "Go" button. The main content area features a "Search" section with three tabs: "Advanced search", "Boolean search", and "Saved searches". The "Advanced search" tab is active, showing a search form with several input fields and dropdown menus. The search term "ankle\* elderly" is entered in the main search field. Below the search form, there are options for "During the last" (with a dropdown menu), "or between" (with two dropdown menus), and "and" (with a dropdown menu). The "Order" is set to "by date" and "Show" is set to "25" results per page. A "Filters" section shows a link to "Journals". A "Search" button is located at the bottom right of the search form.
