## Optimizing dynamic investment decisions for railway systems protection

By: Starita, S (Starita, Stefano)<sup>[1]</sup>; Scaparra, MP (Scaparra, Maria Paola)<sup>[1]</sup>

EUROPEAN JOURNAL OF OPERATIONAL RESEARCH  
Volume: 248 Issue: 2 Pages: 543-557  
DOI: 10.1016/j.ejor.2015.07.025  
Published: JAN 16 2016  
[View Journal Information](#)

### Abstract

Past and recent events have shown that railway **infrastructure** systems are particularly vulnerable to natural catastrophes, unintentional accidents and terrorist attacks. Protection investments are instrumental in reducing economic losses and preserving public safety. A systematic approach to plan security investments is paramount to guarantee that limited protection resources are utilized in the most efficient manner. In this paper, we present an optimization model to identify the railway assets which should be protected to minimize the impact of worst case disruptions on passenger flows. We consider a dynamic investment problem where protection resources become available over a planning horizon. The problem is formulated as a bilevel mixed-integer model and solved using two different decomposition approaches. Random instances of different sizes are generated to compare the solution algorithms. The model is then tested on the Kent railway network to demonstrate how the results can be used to support efficient protection decisions. **DOI:** 10.1016/S1000-9361(11)60361-0  
**Published:** FEB 2012

**Abstract:** During path planning, it is necessary to satisfy the requirements of multiple objectives. Multi-objective synthesis is based on the need of flight mission and subjectivity inclination of decision-maker. The decision-maker, however, has illegibility for understanding the requirements of multiple objectives and the subjectivity inclination. It is important to develop a reasonable cost performance index for describing the illegibility of the decision-maker in multi-objective path planning. Based on Voronoi diagram method for the path planning, this paper studies the synthesis method of the multi-objective cost performance index. According to the application of the cost performance index to the path planning based on Voronoi diagram method, this paper analyzes the cost performance index which has been referred to at present. The analysis shows the insufficiency of the cost performance index at present, i.e., it is difficult to synthesize sub-objective functions because of the great disparity of the sub-objective functions. Thus, a new approach is developed to optimize the cost performance index with the multi-objective fuzzy optimization strategy, and an improved performance index is established, which could coordinate the weight conflict of the sub-objective functions. Finally, the experimental result shows the effectiveness of the proposed approach.

**Record 2 of 5**  
**By:** Warburton, RDH (Warburton, Roger D. H.)  
**Title:** A time-dependent earned value model for software projects  
**Source:** INTERNATIONAL JOURNAL OF PROJECT MANAGEMENT  
**Volume:** 29  
**Issue:** 8  
**Pages:** 1082-1090  
**DOI:** 10.1016/j.ijproman.2011.02.008  
**Published:** DEC 2011

**Abstract:** This paper proposes a formal method for including time dependence into Earned Value (EV) management. The model requires three parameters, which map directly to the fundamental "triple constraint" of scope, cost, and schedule: the reject rate of activities, the cost overrun parameter, and the time to repair the rejected activities. Time dependent expressions for the planned value, earned value, and actual cost are derived, along with the cost performance index (CPI) and schedule performance index (SPI). The model is built on the well-established Putnam-Norden-Rayleigh (PNR) labor rate profile, which is a useful representation for large software projects. We apply the model to a well-known software dataset, demonstrating how to estimate the project's final cost, which converges faster to the correct answer with less variability than standard Estimate-at-Completion (EAC) calculations. The model also accurately predicts the required revised labor profile and the new schedule. (C) 2011 Elsevier Ltd. and IPMA. All rights reserved.

1. **Absolute dimensions of detached eclipsing binaries - III. The metallic-lined system YZ Cassiopeiae**  
By: Pavlovski, K.; Southworth, J.; Kolbas, V.; et al.  
MONTHLY NOTICES OF THE ROYAL ASTRONOMICAL SOCIETY Volume: 438 Issue: 1 Pages: 590-603  
Published: FEB 2014  
**Full Text** **View Abstract**

2. **AMIGA at the Auger observatory: the telecommunications system**  
By: Platino, M.; Hampel, M. R.; Fiszlelew, P.; et al.  
JOURNAL OF INSTRUMENTATION Volume: 8 Article Number: P12014 Published: DEC 2013  
**Full Text** **View Abstract**

3. **Identifying clouds over the Pierre Auger Observatory using infrared satellite data**  
By: Abreu, P.; Aglietta, M.; Ahlers, M.; et al.  
Group Author(s): Pierre Auger Collaboration  
ASTROPARTICLE PHYSICS Volume: 50-52 Pages: 92-101 Published: DEC 2013  
**Full Text** **View Abstract**

4. **Ultrahigh-Energy Cosmic Rays: Results and Prospects**  
By: Kampert, Karl-Heinz  
BRAZILIAN JOURNAL OF PHYSICS Volume: 43 Issue: 5-6 Pages: 375-382 Published: DEC 2013  
**Full Text** **View Abstract**

5. **Point spread function due to multiple scattering of light in the atmosphere**  
By: Pekala, J.; Wilczynski, H.  
NUCLEAR INSTRUMENTS & METHODS IN PHYSICS RESEARCH SECTION A-ACCELERATORS SPECTROMETERS DETECTORS AND ASSOCIATED EQUIPMENT Volume: 729 Pages: 296-301 Published: ...
