Web of Science

- Dříve používán název ISI Web of Knowledge. Produkt a platforma firmy Clarivate Analytics.
- Bibliografická databáze s odkazy na plné texty.
- Databáze není volně přístupná.

Zahrnuje báze:

- Web of Science (převážně bibliografické záznamy odborných článků, lze zde zjistit citovanost autorů a článků),
- Journal Citation Reports (impaktované časopisy).

The screenshot shows the Web of Science search results page. The browser address bar displays the URL: `apps.webofknowledge.com/Search.do?product=WOS&SID=E2Ew3ROsHpVYsjpQfm8&search_mode=GeneralSearch&prID=290900fc-6cc2-4c...`. The page header includes navigation links: Search, Tools, Searches and alerts, Search History, and Marked List. The left sidebar shows the search results summary: Results: 3,313 (from Web of Science Core Collection). The main content area displays a list of search results, sorted by Date. The first two results are selected with checkboxes. The first result is "Relief operations as a multi-project: Colombian case" by Gonzalez Forero, Maria Catalina; Gonzalez Rodriguez, Leonardo Jose, published in the INTERNATIONAL JOURNAL OF INDUSTRIAL ENGINEERING COMPUTATIONS. The second result is "Optimizing temporary work and overtime in the Time Cost Quality Trade-off Problem" by Jeunet, Jully; Orm, Mayassa Bou, published in the EUROPEAN JOURNAL OF OPERATIONAL RESEARCH. The word "scheduling" in the third result's title is highlighted in yellow. Red annotations include a box around the "Marked List" link in the header, a box around the "Export..." and "Add to Marked List" buttons, and arrows pointing from these buttons to the selected records.

Critical Success Factors for Sustainable Construction Project Management

By: Gunduz, M (Gunduz, Murat)^[1]; Almuajeb, M (Almuajeb, Mohammed)^[2]

SUSTAINABILITY

Volume: 12 Issue: 5

Article Number: 1990

DOI: 10.3390/su12051990

Published: MAR 1 2020

Document Type: Article

[View Journal Impact](#)

Abstract

It is necessary to identify critical success factors (CSFs) that affect the construction process. This paper's aim is to define the CSFs considering views of all construction project stakeholders. The contribution of this paper is to categorize project success factors into categories and quantify the effect of each category taking into account the effect of all stakeholders on project efficiency and progress. To achieve this objective, a comprehensive literature review was carried out. After literature review, 40 success factors were compiled into seven categories: project-related factors, company- and work-related factors, client-related factors, project management factors, design-team-related factors, contractor-related factors, project-manager-related factors. Consequently, a survey including these listed success factors was prepared and distributed to various experts in the construction field to be ranked; 148 responses were received. Employing the Relative Importance Index (RII) and traditional Analytic Hierarchy Process (AHP) method with Saaty random index that prioritizes these CSFs, the collected data were analyzed after receiving responses. Even though there were disagreements in stakeholders' views and their goals, significant areas have been identified as project financial

Title: PROJECT MANAGEMENT BY MULTIMOORA AS AN INSTRUMENT FOR TRANSITION ECONOMIES

Author(s): Brauers, WKM (Brauers, Willem Karel M.); Zavadskas, EK (Zavadskas, Edmundas Kazimieras)

Source: TECHNOLOGICAL AND ECONOMIC DEVELOPMENT OF ECONOMY **Volume:** 16 **Issue:** 1 **Pages:** 5-24 **DOI:** 10.3846/tede.2010.01 **Published:** 2010

Times Cited in Web of Science Core Collection: 177

Total Times Cited: 184

Abstract: The countries of Central and Eastern Europe moved from a previously centrally planned economy to a modern transition economy with strong market aspects. This paper proposes project management as an answer to this transition. Traditional Cost-Benefit analysis does not respond to this purpose. Indeed Cost-Benefit analysis is only interested in one specific project and not in a competition between projects. In addition all goals (objectives) have to be translated into money terms, leading sometimes to immoral consequences. On the contrary Multi-Objective Optimization takes care of different objectives, whereas the objectives keep their own units. However different methods exist for the application of Multi-Objective Optimization. The authors tested them after their robustness resulting in seven necessary conditions. MOORA (Multi-Objective Optimization by Ratio analysis) and MULTIMOORA (MOORA plus Full Multiplicative Form), assisted by Ameliorated Nominal Group and Delphi Techniques, satisfy the seven conditions, although in a theoretical way. A simulation exercise illustrates the use of these methods, ideals to be strived for as much as possible.

Title: An AHP (Analytic Hierarchy Process)/ANP (Analytic Network Process)-based multi-criteria decision approach for the selection of solar-thermal power plant investment projects

Author(s): Aragonés-Beltrán, P (Aragones-Beltran, Pablo); Chaparro-Gonzalez, F (Chaparro-Gonzalez, Fidel); Pastor-Ferrando, JP (Pastor-Ferrando, Juan-Pascual); Pla-Rubio, A (Pla-Rubio, Andrea)

Source: ENERGY **Volume:** 66 **Pages:** 222-238 **DOI:** 10.1016/j.energy.2013.12.016 **Published:** MAR 1 2014

Times Cited in Web of Science Core Collection: 108

Total Times Cited: 111

Abstract: In this paper the AHP (Analytic Hierarchy Process) and the ANP (Analytic Network Process) are applied to help the managing board of an important Spanish solar power investment company to decide whether to invest in a particular solar-thermal power plant project and, if so, to determine the order of priority of the projects in the company's portfolio. Project management goes through a long process, from obtaining the required construction permits and authorizations, negotiating with different stakeholders, complying with complex legal regulations, to solving the technical problems associated with plant construction and distribution of the energy generated. The whole process involves high engineering costs. The decision approach proposed in this paper consists of three phases. In the first two phases, the managing board must decide whether to accept or reject a project according to a set of criteria previously identified by the technical team. The third phase consists of establishing a priority order among the projects that have proven to be economically profitable based on project risk levels and execution time delays. This work analyzes the criteria that should be taken into account to accept or reject proposals for investment, as well as the risks used to prioritize some projects over others.
